RE: Environmental Review
South Muncie Industrial Center
Muncie, Delaware County, IN
MUNDELL Project No. M20005

Dear Mr. Bookout:

Mundell & Associates, Inc. (MUNDELL) has completed the attached Environmental Review for the above-referenced Study Area in accordance with MUNDELL Proposal No. P20001. This environmental review includes the results of our visual Study Area reconnaissance; a review of historical ownership and land use records; a review of environmental assessments and regulatory filings associated with the Study Area; and interviews with local citizens familiar with the Study Area. Based on these findings, MUNDELL identified and evaluated contaminants of concern relative to the Study Area, and possible exposure pathways in the surrounding area. As a result, a Study Area Sampling and Analysis Plan (SAP) was developed and the results are presented herein.

We appreciate the opportunity to provide you with this report and look forward to working with you on future projects. In the meantime, if there are any questions regarding the information contained in this letter, or if we can be of further assistance, please contact MUNDELL at (317) 630-9060 or jmundell@MundellAssociates.com.

Sincerely,
MUNDELL & ASSOCIATES, INC.

A handwritten signature in black ink that reads "Luke Johnstone".

Luke Johnstone, E.I.T.
Staff Environmental Engineer

A handwritten signature in black ink that reads "John A. Mundell".

John A. Mundell, P.E., L.P.G., P.G.
President/Senior Environmental Consultant

1.0 INTRODUCTION

Mundell & Associates, Inc. (MUNDELL) was asked by the Delaware County Redevelopment Commission (DCRC) to conduct an environmental assessment and develop a Sampling and Analysis Plan (SAP) for a commercial/industrial area located southwest of Muncie, Indiana known as the South Muncie Industrial Center (“the Study Area”). A Vicinity Aerial Map is presented in **Figure 1**, and a Study Area Map is presented in **Figure 2**.

Based on conversations with members in connection with the DCRC, it is MUNDELL’s understanding that there has been a long history of commercial and industrial activities in the Study Area and/or in the surrounding area which may be linked to historical and possible on-going environmental contamination. Accordingly, the objectives of this assessment are:

- 1) To identify areas within the Study Area and/or surrounding areas which may be subject to environmental contamination;
- 2) To conduct a general risk evaluation of potential exposure pathways for local populations;
- 3) To identify the contaminants of concern (COC’s); and
- 4) To develop a SAP which will quantitatively determine the potential presence or absence of area-wide impacts.

In order to complete the goals of this investigation, MUNDELL conducted a drive survey of the Study Area and completed a general evaluation of readily available historical and regulatory records of properties located in or surrounding the Study Area. More specifically, MUNDELL completed the following tasks:

1. Site and Adjacent Property Observations

A drive-through survey of the Study Area and the surrounding areas was conducted on May 21, 2020 to identify potential sources of environmental impacts or impairments such as existing underground storage tanks (USTs), aboveground storage tanks (ASTs), and potential chemical storage and disposal areas. Only visual observations were made (from the curbside only); however, Ms. Sandra Aul, a concerned local citizen, accompanied MUNDELL staff during the drive survey to provide an oral description of areas which may be a cause for concern. Ultimately, visual observations and information collected during the drive survey will aid in the final SAP to be developed with the completion of this report.

Photographs from the MUNDELL Study Area drive survey on May 21, 2020 are included in **Appendix A**.

2. Geological and Hydrogeologic Information

MUNDELL reviewed available published geological, hydrogeological and groundwater information obtained for the Site and its vicinity.

3. Historical Review

Environmental Data Resources, Inc. (EDR) provided historical aerial photographs from 1948, 1956, 1961, 1967, 1979, 1983, 1988, 1992, 1998, 2008, 2012 and 2016; and USGS topographic maps from 1952, 1962, 1969, 1981, 1988, 1995 and 2013 for the Study Area. In addition, historical aerial photographs from September 2003, March 2005, September 2005, July 2006, August 2007, August 2010 and September 2019 were reviewed courtesy of Google Earth Imagery. Lastly, an aerial image from 2019 courtesy of the Beacon™ GIS map for Delaware County was reviewed (Beacon™, 2020). A Certified Sanborn® Map Report was completed by EDR and the Study Area was determined to be unmapped. An 1887 atlas map of the Study Area courtesy of the Delaware County Historic Maps and Documents ArcGIS Online was obtained (Delaware County, 2020). City directories were provided by EDR for streets in the Study Area including: Niles Road, South Cowan Rd, South Delaware Drive, South Hamilton Avenue, South Hoyt Avenue, West 23rd Street, West 26th Street, West Fuson Road, and West Mt Pleasant Boulevard. City Directories were searched from 1936 through 2014, with no information identified for the above-mentioned streets prior to 1986. Each of these resources was reviewed for the Study Area and surrounding area. The aerial photographs, topographic maps and atlas map are provided in **Appendix B**, and the city directory and Sanborn® Map reports are provided in **Appendix C**.

4. Interviews

A verbal description of historic and current activities and conditions related to the Study Area was provided to MUNDELL by Ms. Sandra Aul, Mr. James Rybarczyk, and Ms. Deborah Malitz, a group of concerned citizens familiar with the Study Area, herein referred to as the “Muncie Citizens Group”.

5. Environmental Records

A search of available environmental records associated with the Study Area and all properties within a one (1) mile radius from the Study Area boundary was performed by EDR and is included in **Appendix D**.

2.0 CURRENT STUDY AREA DESCRIPTION

The Study Area consists of a mixed commercial/industrial setting of about 1,040 acres (1.63 square miles) located southwest of Muncie, Indiana. The Study Area extends up to West 26th Street (Hines Road) and West 23rd Street to the north; South Hoyt Avenue to the west; West Fuson Road to the south; and South Cowan Road to the east. The Study Area is mainly surrounded by residential and agricultural land to the west and south; commercial land and a golf course to the east; and agricultural, residential, and commercial land to the north. A Vicinity Aerial Map is presented in **Figure 1** and a Study Area Map in **Figure 2**.

As described in in further detail in **Section 3.0**, included in **Figure 3** is a property ID map of all properties located within the Study Area which were identified in the records search, and also some properties which are in the near vicinity of the Study Area. For ease of reference, MUNDELL assigned an arbitrary parcel ID number starting with 'M1' up through number 'M45' for properties which were identified in the search within the Study Area, and offsite properties labeled as 'OF1' through 'OF21'. The environmental assessment contained herein will utilize this numbering system when referencing all property boundaries within the Study Area or within its near vicinity.

2.1 CURRENT GENERAL STUDY AREA CONDITIONS

MUNDELL staff environmental engineer Mr. Luke Johnstone, E.I.T., conducted a Study Area drive survey on May 21, 2020, and was accompanied by Ms. Sandra Aul of the Muncie Citizens Group. Activities included a curbside visual inspection of the Study Area and surrounding area, and a verbal description of significant areas was provided by Ms. Aul during the drive survey. Photographs of the Study Area and surrounding areas are included in **Appendix A**.

2.1.1 Current Commercial/Industrial Activity

MUNDELL identified multiple commercial and industrial properties which appear to be currently active within the Study Area and surrounding areas. Properties with current activity are shown alongside properties with historical activity in **Figure 3**. A summary of relevant information for each property is included in **Table 1**.

2.1.2 Soils

The United States Department of Agriculture Natural Resources Conservation Service (USDA NRCS) Web Soil Survey indicates that there are multiple types of classified soil in the Study Area. However, the Urban land-Crosby-Treaty soil classification (UccA) encompasses a large portion of the Study Area and surrounding area which is either linked to sources of contamination or areas

where environmental impacts might exist (see **Appendix E** for the NRCS Web Soil Survey for the Study Area).

According to the NRCS Web Soil Survey, and the NRCS Soil Survey of Delaware County, Indiana, the Urban Land soils are primarily Crosby soils and Treaty soils which have been altered significantly by urban uses such as streets, parking lots, buildings, and other structures. Slopes are 0 to 2 percent (NRCS, 2004; NRCS 2020).

The Crosby soils are somewhat poorly-drained with a water table at a depth around 6 to 24 inches and are located on till plains. Slopes are 0 to 2 percent. The surface layer is silt loam and has 1 to 3 percent organic matter content. Permeability is low to moderately high (0.01 to 0.20 in/hr) in the most restrictive layer around 24 to 40 inches below ground surface (bgs). Available water capacity is low to moderate (about 5.8 to 6.0 inches in the upper 60 inches). The soil is rated as nonhydic.

The Treaty soils are poorly-drained with seasonally high water tables near the surface, with depths generally around 0 to 12 inches. These soils are in depressions on till plains. Slopes are 0 to 2 percent. The surface layer is silty clay loam and has 3 to 6 percent organic matter content. Permeability is moderately high (0.20 to 0.60 in/hr) in the most restrictive layer at a depth of more than 80 inches bgs. Available water capacity is high (about 9.6 inches in the upper 60 inches). This soil is hydric.

2.1.3 Regional Geology and Hydrogeology

The northern portion of Delaware County is located within the water management area known as the Upper Wabash River Basin, while the remainder of the county is located in the White and West Fork White River Basin (Korinek, 2014). This portion of the county is located within the New Castle Till Plains and Drainageways section of the Central Till Plain physiographic region (Indiana Map, 2020).

Based on the published hydrogeological information, the site is located within the White River basin and the estimated thickness of the unconsolidated deposits within the Study Area varies from less than 50 to more than 150 feet. The unconsolidated soils consist primarily of regionally discontinuous intertill or basal sand and gravel on the northern portions, and multiple intertill and basal sand and gravel or buried outwash sands and gravels in the remaining portion of the Study Area. The bedrock beneath the unconsolidated deposits in the Study Area consists of Silurian and Devonian Carbonates parent material that is primarily comprised of dolomite and limestone. The top of the regional bedrock surface within the Study Area is estimated to be between approximately 800-feet to 950-feet Above Mean Sea Level (IndianaMap, 2020).

MUNDELL utilized the Indiana Department of Environmental Management's (IDEM's) Wellhead Proximity Determinator (IDEM, 2019) for retrieving wellhead

information. Based on IDEM's records, the Study Area is not located within a Wellhead Protection Area.

MUNDELL reviewed Indiana Department of Natural Resources (IDNR) records and EDR's radius report for water wells located within the Study Area vicinity. A list of wells found within the 1-mile search radius from the Study Area in the EDR Well Search Report are included in **Appendix F**. According to the EDR well report, there were no public water supply wells found within the 1-mile search radius. However, according to the IDNR records search, there is one significant withdrawal well at MUNDELL ID 8, which is owned by GKN Aerospace (IDRN, 2020).

Based on an IDNR potentiometric surface map of the unconsolidated aquifers of Delaware County, the groundwater flow direction in the vicinity of the Study Area is expected to be directed to the west-northwest towards Buck Creek, which is also generally downslope topographically of the Study Area (Korinek, 2014). Included in **Figure 4** is the regional unconsolidated potentiometric surface map.

2.1.4 Regional Topography and Drainage Basins

Review of USGS topographic maps along with elevation data from the 2012 Indiana Statewide LiDAR acquisition program indicates that the general topography slopes to the west-northwest. The USGS topographic maps are included in **Appendix B**, and **Figure 5** includes the topographic contour map showing the 2012 statewide LiDAR data.

Buck Creek forms a semi-circle around the Study Area, flowing north along the eastern boundary of the Study Area, then turning and flowing to the west. As a result, the local drainage basins in the Study Area have three distinct flow patterns. In the eastern portion of the Study Area, the surface gradient flows easterly towards Buck Creek. Along the northern portion of the Study Area, the water flows to the north, again headed towards Buck Creek. On the west-southwestern portion of the Study Area, the water flows west, through a wetland area eventually connecting to Heath Ditch which ultimately connects to Buck Creek to the west. Included in **Figure 6** is a map showing the general surface water flow patterns and drainage basins in the Study Area.

2.1.5 Wetland Inventory

According to the U.S. Fish and Wildlife Service National Wetland Inventory, there are freshwater emergent and forested/shrub wetland areas in multiple locations with the Study Area boundary. Included in **Appendix G** is a wetlands map of the Study Area courtesy of the National Wetland Inventory (USFWS, 2020).

2.1.6 Regional Wind Patterns

Wind rose data collected at the Delaware County Airport (Station ID: MIE in the IN_ASOS network) which is located approximately 5.6 miles to the north of the Study Area was obtained from the Iowa State University Iowa Environmental Mesonet (IEM) database (ISU, 2020). The annual and monthly wind rose plot from 1972 through July 13, 2019 is included in **Appendix H**. Review of this data indicates that the predominant wind direction in the area is from the west/southwest to the east/northeast.

2.1.7 Public Water Infrastructure

Indiana American Water provides public water to the Study Area and surrounding areas. Mr. Dan Allen, the Senior Operations Superintendent with Indiana American Water for the Muncie area was contacted in an effort to determine if there were any properties in the Study Area or near vicinity which did not have access to public water, and thus may likely be on private wells. Mr. Allen indicated that Indiana American Water no longer provides a GIS map of service areas. However, in a phone conversation on June 8, 2020, he was able to verbally confirm that the Study Area and east of the Study Area are serviced by Indiana American Water, and that to the west and south there are areas which are not serviced. In a letter report prepared by IDEM for the Franklin Property (MUNDELL ID M5) on December 10, 2015 (IDEM Virtual File Cabinet Document No. 80183648), a GIS map of the service areas for Indiana American Water to the west and south of the Study Area is provided. A copy of this letter report along with the water main service area is included in **Appendix I**. It can be reasonably assumed that areas which are not serviced by Indiana American Water are likely on private wells (to the west and southwest of the Study Area).

2.1.8 Pipelines

Review of USGS topographic maps from 1962 through 1995 (**Figure B22** through **Figure B26**) indicate that there was an underground pipeline extending from the north portion to the southwest portion of the Study Area. Furthermore Indiana Maps indicates that there is a 10-inch natural gas pipeline extending from east to west about 1,100 feet south of West Mt Pleasant Boulevard, with two 4-in to 10-in pipelines branching off to the north in-line with South Cowan Road (IndianaMap, 2020).

2.2 Regional Environmental Monitoring

During the review process, MUNDELL identified multiple past and on-going environmental remediation and monitoring efforts in the Study Area and surrounding properties. Environmental contamination specific to individual properties is discussed in more detail in **Section 3.0**. However, there are regional actions that are on-going which encompass the Study Area, and a brief description is included below.

2.2.1 Air Quality Nonattainment Area

The United States Environmental Protection Agency (USEPA) identifies, records, and monitors areas of the country where air pollution persistently meet or exceed the Nation Ambient Air Quality Standards (NAAQS) (USEPA, 2020a; USEPA, 2020b). The designated areas are called ‘nonattainment areas’, and updated information for these areas are included in the USEPA ‘Green Book’. When a nonattainment area has shown that it meets the NAAQS standards, USEPA will change its designation to a ‘maintenance area’ (USEPA, 2020c).

According to the latest USEPA Green Book (as of February 29, 2020), the Study Area is or has been located in two (2) nonattainment areas. First, the entire Delaware County was designated as an 8-Hour Ozone Maintenance Area per the 1997 Standards. According the USEPA Green Book, these standards were revoked on April 6, 2015, and Delaware County was no longer designated as an 8-Hour Ozone Area (USEPA, 2018).

Secondly, a majority of the Study Area is located in a nonattainment area for the 2008 lead (Pb) standards. According to the USEPA Green Book (USEPA, 2020c),

“In 2008, EPA strengthened the NAAQS for lead (Pb), setting a level of 0.15 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$). The Design Value (air quality value) is the rolling 3-month average not to be exceeded in any three month period.”

The nonattainment area for lead encompassing much of the Study Area can be seen in the USEPA Green Book map included in **Appendix J**. According to the Green Book, the monitoring location is located at 2601 West Mt Pleasant Boulevard, on the northeast corner of South Hamilton Avenue and West Mt Pleasant Boulevard, northeast of “plant – downwind site” (at latitude 40.15842, longitude -85.41502) (USEPA, 2020c). The “plant” that the Green Book is referring to is likely the Exide Technologies plant (MUNDELL ID M2) which operates a secondary lead smelter on-site, among other various other industrial activities.

According to the Green Book, the lead air design value at the site was $2.14 \mu\text{g}/\text{m}^3$ from 2008 through 2010, between 0.26 to $0.34 \mu\text{g}/\text{m}^3$ from 2011 to 2014, and $0.11 \mu\text{g}/\text{m}^3$ from 2015 through 2017. According to a Phase I report completed by SME in December of 2019, the three month average at this station ranged from 0.01 to $0.011 \mu\text{g}/\text{m}^3$ from May of 2015 through August of 2019 (see **Section 2.3** for further details regarding the SME Phase I report). Due to the air design value meeting the required NAAQS requirements from 2015 through at least 2016, IDEM proposed that the area be re-designated as a maintenance area instead of a nonattainment area. In May of 2020, the USEPA approved this request. (USEPA, 2020d).

2.2.2 Muncie Sanitary District's Bureau of Water Quality

The Muncie Sanitary District's (MSD's) Bureau of Water Quality (herein referred to as the Muncie BWQ) prepared an annual industrial pretreatment report for 2018 summarizing the Muncie Pretreatment Program administered under the authority of IDEM and USEPA (MSD, 2019). As stated in this report (MSD, 2019),

“Through the pretreatment program, the Bureau serves as the Control Authority responsible for ensuring that local industries comply with the regulatory requirements of the EPA, IDEM, and Muncie’s local Pretreatment Ordinance.”

As indicated in this report, there were sixteen (16) industrial discharge permits authorized by the Muncie BWQ in 2018, and of six (6) these industries are located on the Study Area, including:

- CamTool, Inc. (MUNDELL ID M13)
- Exide Technologies (MUNDELL ID M2)
- GKN Aerospace Muncie, Inc. (MUNDELL ID M8)
- Haylex Manufacturing, LLC (MUNDELL ID M7)
- Mid-West Metal Products (MUNDELL ID's M16, M25A, M31, and M42)
- Progress Rail Manufacturing Corp. (MUNDELL ID M29)

According to the 2018 annual report, three (3) of these properties (Exide, GKN Aerospace and Mid-West Metal Products) had minor non-compliance issues in 2018 but are now back in compliance. The remaining properties were always in compliance in 2018.

Furthermore, this report indicates that there are currently three (3) active and three (3) closed underground remediation and dewatering permits issued within the Muncie Sanitary District jurisdictional boundaries. However, none of these permits were issued or are currently issued within the Study Area (as of 2018).

The Muncie BWQ also has provided supplemental GIS mapping of the water quality information in the area (MSD, 2006). This supplemental report shows the water quality data for the surface water in the Muncie area from the 1970's through the 2000's. The closest monitoring location to the Study Area is at Buck Creek at the intersection of South Cowan Road (around 0.25 miles north of the Study Area). According to this report, there has been an 84% reduction in average Chromium concentrations, an 86% reduction in average Zinc levels, and a 97% reduction in average lead concentrations in the 2000's compared to 1970 levels at this sampling location. Furthermore, the fish community and habitat quality in the areas along Buck Creek in the surrounding area of the Study Area range from fair to good.

2.2.3 Indiana 303(d) List of Impaired Waters

According to Indiana's List of Impaired Waters GIS application, the surface water streams discharging from the Study Area and in the vicinity of the Study Area are included the worst category (Category 5) for water quality impairment affecting recreational, aquatic life use, and fish consumption use. Impaired biotic communities, E. Coli bacteria, and Polychlorinated biphenyls (PCBs) in fish tissue has been found in the waters (IDEM, 2019b).

2.2.4 NPDES and Air Permitting

There are multiple properties within the Study Area and nearby vicinity which have been issued National Pollutant Discharge Elimination System (NPDES) permits or air permits in the past or have active permits. As discussed in **Section 3.0**, a summary of all historical and/or current permits is included in **Table 1** for properties within the Study Area and nearby vicinity. Relative information from each permitted activity was considered in the preparation of the Study Area SAP as described in **Section 4.0**.

2.2.5 Brownfield Sites and On-going Remedial Activity

Throughout the Study Area, there have been various sources of environmental contamination which have led to significant environmental impacts. As a result, there are multiple brownfield sites within the Study Area which have completed various stages of investigation and remediation but still require institutional controls, as well as those that have undelineated and unaddressed environmental impacts which have yet to be remediated. A summary for each property within the Study Area and notable properties in the nearby vicinity is included in **Table 1**, and relevant information was considered in the preparation of the Study Area SAP as described in **Section 4.0**.

2.3 Technical Reports by Other

During the records review for the properties located in the Study Area and nearby vicinity, MUNDELL gathered supplemental technical reports for properties when necessary from the Indiana Department of Environmental Management (IDEM) Virtual File Cabinet (VFC). Portions of these documents were referenced as needed when evaluating the potential for environmental contamination, as further described in **Section 3.0**.

Additionally, the Muncie Citizens Group provided to MUNDELL a Phase I: Records Review of the Lead and Nuisance Dust Forensics Report completed by SME on December 13, 2019 (SEM, 2019). This report included a records review of industrial activities in the vicinity of the Study Area which may have process-related releases into the atmosphere. After identifying nine (9) industrial facilities within the Study Area, and three (3) industrial facilities in the near vicinity, SME recommended placing eight (8) temporary air monitoring assemblages within the

Study Area boundary to monitor for on-going releases of lead (Pb) and particulate matter (PM, PM₁₀, and PM_{2.5}).

In summary, this report identified potential sources of on-going releases into the atmosphere and developed a reasonable plan to monitor these current threats. However, minimal consideration for historical releases was included in the report. As a result, the sampling plan does not appropriately address the possibility of historical impacts which may exist nor the possibility of on-going or historical impacts to the surface or subsurface environment. Consideration of SME's proposed sampling plan is included in MUNDELL's final proposed SAP as discussed in **Section 4.0**.

3.0 PROPERTY REVIEW

Current and past land uses were investigated to identify practices or conditions that may have contributed to environmental contamination impacting the Study Area or surrounding properties. This included an analysis of historical aerial photographs and topographic maps, city directories, and a review of historical records for the properties within the Study Area and selected properties in the nearby vicinity. In addition, a review of databases and files from federal, state, and local environmental regulatory agencies was conducted to identify use, generation, storage, treatment or disposal of hazardous materials and chemicals, or release incidents of such materials, which may have contributed to any environmental impacts. EDR provided the regulatory environmental database information to MUNDELL, which is available in the EDR Area / Corridor Report included in **Appendix D**.

3.1 Review Purpose

Given the large quantity of commercial and industrial facilities along with the multiplicity of historical contamination incidents in the Study Area and nearby vicinity, there was an extraordinary amount of regulatory records available for review. The ultimate goal of this report, however, was not to complete a comprehensive review of every property within the Study Area, but rather to develop a Sampling and Analysis Plan (SAP) in an effort to identify the most critical environmental impacts in the nearby area. As a result, the records review as described below was not meant to be conducted in a manner which provided a comprehensive review of each property. Instead, the information for each property was reviewed to the extent necessary to identify the essential information relative to the ultimate goal of developing the SAP.

Furthermore, the scope of this investigation was beyond that which is included in a typical Phase I Environmental Site Assessments (Phase I ESAs). Therefore, while some portions of this report have been prepared in a similar manner to a traditional Phase I ESA, no claim is made that this report has been prepared in conformance with all Phase I ESA standards and practices as set forth in 40 CFR Part 312.

3.2 Review Process

For each property within the Study Area, MUNDELL reviewed the regulatory information provided in the EDR Area / Corridor Report and EDR City Directory report to the extent necessary. In some cases, the EDR report contained enough information to determine key information for the property. However, MUNDELL often completed additional research and incorporated information from supplemental sources such as the Indiana Emergency Response spill database,

the IDEM VFC, and the Muncie Citizens Group interviews when further clarification of the property history was needed. Included in **Table 1** is a summary of applicable regulatory and historical information for each property within the Study Area identified in the records search.

The EDR regulatory search extended one (1) mile beyond the Study Area boundary. While not all properties outside of the Study Area were reviewed at the same level of detail as those within, MUNDELL did identify properties in the adjacent or nearby properties which could also impact the area in the near vicinity of the Study Area, and a summary of these properties is also included in **Table 1**.

Included in **Figure 3** is a map of all properties located within the Study area which were identified in the above-referenced records search and also select properties which were identified in the near vicinity of the Study Area. For ease of reference, MUNDELL has assigned an arbitrary parcel ID number starting with 'M1' up through number 'M45' for properties which were identified in the search within the Study Area and offsite properties labeled as 'OF1' through 'OF21'.

3.2.1 Chemicals of Concern (COCs)

During the review process for each property, MUNDELL considered the following Chemicals of Concern (COCs):

- Heavy Metals (e.g., lead, arsenic, chromium, mercury, etc.)
- Polychlorinated biphenyls (PCBs)
- Per- and Polyfluoroalkyl (PFAS)
- Volatile / semi-volatile organic compounds (e.g., benzene)
- Chlorinated volatile / semi-volatile organic compounds (e.g., trichloroethylene (TCE))

The COCs included in this list were used to efficiently evaluate each property and identify major sources of contamination in the area. While other chemicals were sometimes considered in the SAP, emphasis was given to the above-mentioned COCs which are often associated with industrial activities and are known to be readily available for off-site transport and also persistent threats to the environment and to human health.

It should be noted that purpose of this investigation is to consider commercial/industrial activities which could increase or be connected to an increase in the risk of environmental hazards impacting human health or the local ecology in the surrounding area. As a result, all environmental hazards present in the area may not be addressed in the final SAP. For example, the ubiquitous environmental threats of asbestos-containing material or lead-based paint in residential homes, railroad ties treated with toxic chemicals, or radon intrusion were not considered in the development of the SAP.

3.2.2 Recognized Environmental Conditions (RECs)

Based on the review of regulatory, historical, and/or other relevant information, COCs for each property reviewed were identified. Upon considering the property history, the nature of the COCs involved, and/or the reported chemical releases, a Recognized Environmental Condition (REC) was identified at those properties which could be a source of environmental contamination impacting the human health in the surrounding areas.

A REC can be associated with hazardous substances present on-site, even when such substances are stored and used in a legally compliant manner. RECs do not include de-minimis conditions that generally do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate regulatory agencies.

It should be noted that, as mentioned in **Section 3.1**, the scope of this environmental investigation is different than what is typically associated with a Phase I ESA. RECs were identified in this report with consideration of the ultimate goal of this investigation to develop an SAP and identify areas of significant environmental contamination. As a result, while many RECs were identified as defined in ASTM E 1527 guidelines, no guarantee can be made that all RECs identified adhere to this guideline which are typically followed in Phase I ESAs.

Along with a general summary for each property reviewed within the Study Area and select properties in the vicinity, **Table 1** includes a summary of the identified:

- COCs (if applicable),
- nature of release (if applicable),
- and the REC (if identified).

While **Table 1** includes a general summary of property information and includes both properties with a REC and those without, **Table 2** includes only those properties with an identified REC as well as a more specific description of the property information as it relates to the REC and ultimately the SAP. **Figure 7** shows properties included in **Table 2** (*i.e.*, those with a REC), whereas **Figure 3** shows properties included in **Table 1** (*i.e.*, those with or without a REC)).

3.2.3 Exposure Pathway

Along with identifying the intrinsic hazard the presence of a COC has in the Study Area, its ultimate fate and transport was considered in order to determine how the COC could reach a sensitive receptor (*e.g.*, human or ecological). In other words, the exposure pathway was considered. This process involves knowledge of the COC, its chemical properties, and the type of release. In addition, the local atmospheric, hydrological, and hydrogeological conditions

were considered. Combined, these factors dictate the fate and transport of the COC in the environment.

Consideration of the exposure pathway was a two-step process. First, it was implicitly considered when determining the COC and REC at a site; the mere presence of a COC at a property can but does not always designate a REC at the property, but rather the COC was evaluated with consideration of the ultimate goal of developing an SAP to identify areas of significant environmental contamination. For example, the mere presence of a COC in an underground storage tank (UST) does not necessarily constitute a REC at a property; the size of a release, nearby hydrogeological conditions, and the distance to a possible receptor would also need to be considered.

Once a REC was determined at a property, possible exposure pathways were explicitly considered in order to guide the final SAP. Specific exposure pathways considered included:

- Vapor Intrusion;
- Ingestion (e.g., via drinking water from a private well);
- Dermal Exposure (e.g., via surface water);
- Inhalation/ingestion (e.g., via surficial soil / dust);
- Inhalation (e.g., airborne contamination);
- Ingestion (e.g., fish consumption).

The explicit exposure pathway(s) identified for each identified REC is included in **Table 2**.

3.2.4 Level of Concern

An additional categorization of the identified RECs in the area was completed by MUNDELL in order to aid in the development of the SAP. Each property was qualitatively designated as either a 'primary' or 'secondary' level of concern. In general, those properties with a 'primary' designation were addressed in the SAP. Those with a 'secondary' designation had a REC which could pose a risk to the surrounding area, but upon considering the size of release, type of contamination, and/or exposure pathway, the risk to the surrounding area was not seen as imminent relative to properties with a 'primary' designation. Accordingly, the SAP was developed considering the 'primary' issues of concern while the 'secondary' issues of concern were included in the SAP when practical.

4.0 SAMPLING AND ANALYSIS PLAN

Upon completion of the records review, COC and exposure pathway evaluation, and the REC identification, the Sampling and Analysis Plan (SAP) was developed. The SAP is based not only on the identified RECs, but also the local atmospheric, hydrological, hydrogeological data along with other information collected during this investigation. In essence, the SAP is the synthesis of all information gathered during this investigation in order to guide future investigations in an effort to elucidate the most critical environmental hazards which may exist in the area.

During the review process, there were several environmental concerns identified in connection with the Study Area or nearby area. The potential for an individual property to be a source of contamination varied, with some posing a minor threat while others likely being significant sources. However, it was often the case that the most significant potential threat to the surrounding area is from the combination of multiple sources in the area rather than just linked to a single property.

The identified potential environmental hazards were grouped into categories based on the general location and/or the type of threat. Often, there were multiple environmental concerns or exposure pathways associated with each overarching environmental concern. Therefore, multiple SAP's were developed to address each specific issue identified within each overarching problem. When combined, these SAP's provide a succinct data collection plan that will likely expose potential area wide impacts which may exist and also provide valid analytical results. Moreover, the separation and categorization of the SAP's also allows for future investigations to be carried out in stages, if necessary.

Included in **Table 3** is a summary of all SAP's and methods of sampling. **Figures 8 to 10** include a map of the proposed sampling areas. The general description of each overarching problem identified during the review process is included below followed by a brief description of the sampling plans and methods of sampling.

4.1 Overarching Concerns

4.1.1 Southwest Drainage Basin

As illustrated in **Figure 6**, the southwest portion of the Study Area flows to the west through MUNDELL ID M5. Review of historical aerial imagery (see **Figures B5 through B20** in **Appendix B**) and the Nation Wetland Inventory map (see **Appendix G**) as well as interviews with the Muncie Citizens group indicate that there is a retention pond and wetland area located on MUNDELL ID M5. During flood events, it appears that this retention pond area discharges west,

running adjacent to residential properties before passing through agricultural land and connecting to Heath Ditch which ultimately connects to Buck Creek.

It should be noted that the Muncie Citizens Group reported that there is a storm drain inlet on the west portion of MUNDELL ID M5 which this drainage ditch reportedly drains into prior to overflowing into the downgradient drainage channel leading to Heath Ditch. Furthermore, Ms. Sandra Aul with the Muncie Citizens Group indicated that water from this drainage ditch floods the front yard drainage ditches of the residential properties along South Hoyt Avenue adjacent to MUNDELL ID M5 during large flood events.

Multiple properties upgradient of this retention pond area at MUNDELL ID M5 have been identified as possible surficial sources of heavy metals such as lead. Most notably are MUNDELL ID M2 and M3, where remediation of surficial soils along the drainage ditches upstream to MUNDELL ID M5 has been completed due to high levels of lead from contaminated surface water discharge. The drainage ditch remedial activities at both of these properties (MUNDELL ID M2 and M3) did not appear to include the drainage channels west of South Delaware Drive which lead to MUNDELL ID M5.

Given the known heavy metal contamination from MUNDELL ID M2 and M3, along with the known handling of heavy metals at multiple properties in the upgradient drainage basin (e.g., MUNDELL ID M16 and M17), there is a high likelihood that the retention pond area at property MUNDELL ID M5 has been receiving surface water heavily contaminated with heavy metals, most notably lead, for years if not decades. Furthermore, the pooling of water on the north portion of MUNDELL ID M5 in the wetland/retention pond area likely acted as a settling pond for any contamination present in the stormwater. Moreover, review of historical aerial photographs (see **Figures B10** through **B16** in **Appendix B**) along with reports from the IDEM VFC and Muncie Citizens Group interviews (see MUNDELL ID M5 in **Table 1**), reveals that preliminary earthwork/grading activities were completed on the north portion of MUNDELL ID M5 around 2006. While not known, if these earthwork activities used soil from the site, the already contaminated soil could have effectively been spread across the entire area.

In addition to this above-mentioned potential contamination, the SAPs developed in this area also address a potential significant source of contamination linked to a historic, unregulated landfill located on the south-central portion of MUNDELL ID M5 (see **Tables 1** and **2** for more information). Lastly, SAPs developed in this area address potential sources of cVOCs and dioxins contamination in the surface and/or subsurface.

SAPs associated with this overarching concern include SAP-A, SAP-B, and SAP-C as described in **Table 3**.

4.1.2 Toxic Releases to Atmosphere

There are multiple sources of toxic releases to the atmosphere across the Study Area and in the near vicinity. One of the more prominent sources of atmospheric contamination is Exide Technologies which operates a secondary lead smelter and has been known to have chronic and acute releases of heavy metals spanning multiple decades. The developed SAPs associated with this issue address two concerns:

- 1) On-going, active releases, and
- 2) Heavy metal deposition from historic releases.

The SAP addressing the on-going releases involves a system of temporary air monitoring assemblages which is similar to the plan put forth in the Phase I: Records Review of the Lead and Nuisance Dust Forensics Report completed by SME on December 13, 2019, as described in **Section 2.3**. However, unlike the report prepared by SME, MUNDELL's SAP includes monitoring of additional COCs and also has positioned the monitoring locations in different locations. It should be noted that sampling for particulate matter (PM) was added to the SAP to account for the industrial releases in the area.

SAPs associated with this overarching concern include SAP-D and SAP-E as described in **Table 3**.

4.1.3 Buck Creek

As indicated in **Section 2.2.2**, the surface water in the Muncie area has been closely monitored since the 1970's, with the nearest monitoring location to the Study Area located at the crossing of Buck Creek and South Cowan Road. However, there are potential sources of acute heavy metals and PCB releases originating from properties in the east portion of the Study Area (e.g., MUNDELL ID M27A and M29) which should be more closely monitored.

SAPs associated with this overarching concern include SAP-F as described in **Table 3**.

4.1.4 Groundwater Contamination

There are multiple sources of groundwater contamination in the area. Two SAPs have been developed to address this concern, which vary depending on whether the homes have private wells or public water access, which thereby impact the exposure pathways and COCs.

SAPs associated with this overarching concern include SAP-G and SAP-H as described in **Table 3**.

4.1.5 Heavy Metal Contamination

As indicated previously, the industrial activities in the Study Area have been linked to both chronic and acute heavy metal contamination (most notably lead).

The above SAPs address these concerns. An additional SAP was developed which does not directly sample the environment in search of contamination, but rather tests the population in the area via voluntary blood tests. While this SAP could be the most effective way to identify the impact of the industrial activities in the area, the logistics to complete this task may be challenging. Thus, a separate category and SAP was developed to include this potential supplemental SAP.

The SAP associated with this overarching concern include SAP-I as described in **Table 3**.

4.1.6 On-going Remediation / Monitoring

During the review process, multiple brownfields and properties with on-going remediation due to environmental contamination were identified. A portion of these properties have known areas of contamination, while others have undelineated areas of contamination. In addition, some properties have ongoing activities which could result in contamination. The properties referred to in this section are those where remedial activity or further monitoring has already been requested by IDEM or where Environmental Restriction Covenants (ERCs) are in place but call for further investigations in the event of future property development. If remedial activities were not on-going or ERCs not in place, MUNDELL would have included SAPs more specifically and aggressively targeting these concerns. In lieu of SAPs to address these concerns, MUNDELL recommends that a third party provide oversight to monitor the progress of selected properties where remediation is ongoing or where contamination still exists in the context of an ERC. These properties are highlighted in **Figure 10** and summarized in **Table 3**.

The SAP associated with this overarching concern include SAP-J as described in **Table 3**.

4.2 SAP Methodology

As indicated in the previous section, there are multiple SAPs which address the various issues identified across the Study Area. Each SAP includes select 'sampling areas' or proposed locations where the sampling would occur to address the specific concern in the area. Attached with each 'sampling area' are proposed sampling methods. The sampling areas can be seen on **Figures 8, 9, and 10**, and the SAP and sampling activities associated with each sampling area is included in **Table 3**.

As seen in **Table 3**, there are seven (7) general types of sampling methods proposed:

- X-ray Fluorescence (XRF) instrument sampling
- Geophysical survey

- Soil Sampling
- Surface Water Sampling
- Private Well Water Sampling
- Monitoring Well Installation
- Air Monitoring
- Voluntary Blood Tests

The specific type of geophysical surveys may vary depending on the issues under investigation, and the extent that these techniques are used may vary depending on initial sampling results. However, consideration of various types of geophysical methods will likely provide valuable data when evaluating the potential sources.

Also included in **Table 3** are two 'stages' of sampling. This was included since the results of some tests such as XRF sampling and geophysical surveys will likely indicate where potential hotspot exists which would necessitate further testing.

Lastly, it should be noted that the sampling areas are meant to highlight the general areas where testing is recommended. The actual sampling locations within each 'sampling area' or the actual location for each monitoring point will be determined prior to completion of each SAP upon consideration of issues such as budgetary and/or land-accessibility restraints.

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 CONCLUSIONS

This Environmental Review for the South Muncie Industrial Center included one reconnaissance visit to the Study Area, a review of the previously listed available environmental databases and related agency information for the Study Area and surrounding properties, interviews, topographic maps, aerial photographs, published geologic information, and other related items. This information was used to evaluate existing or potential environmental impairment in connection with the industrial/commercial activities in Study Area or surrounding areas due to current or past land use. Subsequently, a comprehensive SAP was developed in order to identify/confirm potential area wide environmental impacts affecting the nearby human population and/or ecological community.

5.2 RECOMMENDATIONS

To identify the potential area wide environmental impacts in the vicinity of the Study Area, MUNDELL recommends completion of all SAPs as proposed in **Section 4.0**, **Table 3**, and **Figures 8 to 10**. The combination of all SAPs provides a robust sampling plan which would likely expose potential areas of concern while providing analytically valid results. However, MUNDELL has separated the areas of concern into different SAPs which allows for each to be completed independently of the others. This provides the overall SAP with the flexibility to prioritize areas of concern which would be helpful in the event that funding is not readily available for the entire SAP. Furthermore, since there is sometimes overlap in the COCs/sources of contamination addressed with different SAPs, the results of one SAP may help engage regulatory agencies and thereby provide funding for further investigations. Accordingly, while MUNDELL recommends the completion of all SAPs, in the event that this is not possible, MUNDELL recommends the prioritization of SAPs as follows:

- 1) Completion of SAP-A and SAP-C, in connection to the southwest drainage basin;
- 2) Completion of SAP-E, in connection to the historic heavy metal atmospheric deposition;
- 3) Completion of SAP-H, in connection to potential groundwater contamination sources;
- 4) Completion of SAP-B, SAP-D, and SAP-F, in connection to potential on-going surficial and atmospheric discharges; and

- 5) Completion of SAP-G, in connection to potential groundwater contamination sources.

In addition, if it is practical to efficiently and effectively complete SAP-I, MUNDELL recommends it should be done prior to or in conjunction with SAP-A, SAP-C, and SAP-E (the first SAPs recommended to complete).

Lastly, SAP-J can be carried out prior to, in conjunction with, or post all aforementioned SAPs, pending funding availability.

6.0 LIMITATIONS

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This statement is in lieu of other statements either expressed or implied. This company is not responsible for the independent conclusions, opinions or recommendations made by others based on the records review, area observations, field exploration, and laboratory test data presented in this report.

It should be noted that environmental evaluations are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and area evaluation. For these types of evaluations, it is often necessary to use information prepared by others and MUNDELL cannot be responsible for the accuracy of such information. Additionally, the passage of time may result in a change in the environmental characteristics at this Study Area and surrounding properties. This report does not warrant against future operations or conditions, nor does this warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit and is not intended to satisfy the requirements of any state, federal, or local real estate transfer laws.

This report is intended for the sole use of Delaware County Redevelopment Commission. This report may not be used or relied upon by any other party without the written consent of MUNDELL. The scope of services performed in execution of this evaluation may not be appropriate to satisfy the needs of other users, and use or re-use of this document or the findings, conclusions, or recommendations is at the risk of said user.

Our conclusions regarding the potential environmental impact of nearby, off-site facilities are based on readily available information from the environmental databases and the indicated groundwater flow direction. A detailed file review of each facility was beyond the scope of work.

MUNDELL reviewed past ownership of the properties in the Study Area in an attempt to determine past property usage. MUNDELL is not a professional title insurance firm and makes no guarantee, explicit or implied that the listing reviewed represented a comprehensive delineation of past property ownership or tenancy for legal purposes.

MUNDELL does not warrant the correctness, completeness, currentness, merchantability, or fitness of any information related to records review provided in this report. Such information is not the product of an independent review conducted by MUNDELL, but is only publicly available environmental information maintained by federal, state, and local government agencies.

The scope of this investigation was beyond that which is included in a typical Phase I Environmental Site Assessment (Phase I ESA). Therefore, while some portions of this report have been prepared in a similar manner to a traditional Phase I ESA, no claim is made that this report has been prepared in conformance with all Phase I ESA standards and practices set forth in 40 CFR Part 312.

M2 (2 of 4)	T106	EXIDE TECHNOLOGIES (or Exide Corp)		CORRACTS	IND000717959		<p>Sources: EDR / IDEM VFC. Document No. 58558472 and 80092560: In 2010-2011, lead and arsenic shallow soil levels above Industrial default closure levels in east / northeast portion of property. Cover/cap system (building, asphalt, grading) used as institutional controls. Previous topo indicated flow from south to north. Plan not complete, no delineation shown. Draft ERC submitted, but has not been finalized as of 2015.</p> <p>Document No. 63153543: Document date is 2011. Indicates off-site sampling showed no exceedances of residential standards (no indication in relation to industrial limits). Lead detected in groundwater slightly above MCL. Flow direction reportedly to south. Sampling by General Motors at south adjoining property indicates no lead in groundwater above MCL. "Current Human Exposure Under Control" for land- and groundwater-use conditions.</p> <p>Document No. 58661578 and 80092560: In 2004, remediation action to remove shallow surface soil (<6") along drainage ditch along northern/northwest edge of property. 383 tons of soils exceeding 400 mg/kg total lead removed and disposed off-site. No further action issued 02/03/2006.</p> <p>NAICS Code(s): Secondary Smelting, refining, and alloying of nonferrous metal (except Copper and Aluminum)</p> <p>Main concerns: Shallow Surface (<2ft) contaminated in northeast/east portion (lead above RISC Industrial Direct exposure). Institutional controls in place. No contamination delineation seen.</p>	Heavy Metals (e.g., lead, arsenic)	Air; Surface; Subsurface	Yes	Yes; See Table 2 for further details
	T106			RCRA-LQG	IND000717959	The following Information can be found in EDR and Multiple documents found on IDEM VFC. However, the majority of the information can be found in the IDEM VFC document no.: 82940653 and 82897821 Company Description: manufacturer and recycler of lead-acid stored electric power batteries; owns and operates a secondary lead smelter to recover and recycle lead and plastic materials which become feed materials for the battery manufacturing operations; recycles spent lead-acid batteries and other lead-containing wastes, materials, and residues to recover lead for subsequent use; recovers plastic chips generated through the battery breaker operation for recycling and reuse. Provides Lead reclamation services to non-Exide facilities including other battery manufacturing facilities. In addition to receiving spent batteries, the Muncie facility also receives lead-containing wastes and other lead-containing materials from off-site facilities for lead reclamation. Facility Operations: include extraction, processing, and reclaiming of lead and plastic from lead-acid electric storage batteries. Battery acid and facility wastewater is treated in an on-site wastewater treatment plant (WWTP). The City of Muncie has authorized the discharge of pretreated wastewater from the WWTP under a local permit issued by the Muncie Sanitary District, Bureau of Water Quality.

However, the majority of the information can be found in the IDEM VFC document no.: 82940653 and 82897821</p> <p>RCRA: Two RCRA-permitted hazardous waste container storage areas associated with secondary lead smelter reclaim/recovery operation where lead containing hazardous wastes, lead-containing non-hazardous wastes, and spent batteries are received from off-site sources and may be temporarily stored prior to recycling. Floor areas are constructed with an 8-inch steel-reinforced concrete base.</p> <p>RCRA: one RCRA-permitted hazardous waste Containment Building which holds lead containing materials awaiting processing and includes the furnaces used in the reclamation process and related processing areas.</p> <p>Baghouse Dust: baghouse dust is received from on-site or off-site lead smelters and battery manufacturing facilities. This material may be stored in Bin 6 prior to being reclaimed in the Reverberatory furnace. Baghouse dust generated on-site is excluded from RCRA permit. Dust may be transferred by screw conveyor into stockpiles in the bins or large mobile containers, which are promptly emptied into the bins, and this feed material is then recycled in the Reverberatory furnace. Baghouse dust is also introduced directly into the reverberatory furnace. Reverberatory furnace and baghouse produce slag. Baghouse slag is sent to landfill for disposal.</p> <p>Lead smelting: wastewater generated from scrubbers treated in the on-site wastewater treatment plant.</p>	Heavy Metals (e.g., lead, arsenic)	Air; Surface; Subsurface	Yes	Yes; See Table 2 for further details

M3 (1 of 2)	AA163	DELCO-REMY BATTERY PLANT 4500 S. DELAWARE DR. (317)747-2134		ERNS			<p>According to IDEM VFC Documents No. 70023082, 80189841, and 80053831: -Brownfield site issued a RCRA Notice of Corrective Action Complete with Controls on June 4, 2015 -"Migration of Contaminated Groundwater Under Control" as of 12/11/15</p> <p>Site Description: -General Motors constructed Delphi-E Muncie Battery Plan 26 in 1978. -Manufacturer of auto, truck, and electric car batteries. -Site consisted of office/manufacturer/storage buildings, bag house, PVC building, paved parking, on-site wastewater treatment facility (WWTF) and two waste lagoons, power station, and two railroad spurs. -Battery manufacturing included lead cell production and plastic injection continued until 1999. -ASTs and USTs from 500 to 100,000 gallons in size existed on site -Storm and process water treated onsite WWTF, then discharged into south ditch with NPDES Permit. -Multiple air discharge permits related to lead handling and battery charging areas -500,000 gallon water reservoir for fire suppression was installed in southeast portion of site. -Production areas decontaminated and AST's and USTs removed prior to 2005</p> <p>Remedial Tasks: -Soil excavation activities in 2004, 2005, and 2008 following plant decommission -In 2009, three lead contaminated areas were identified: North Property Area, Lagoon Pump House Area, and South Ditch Area -Stormwater sediments in South Ditch identified due to low lead concentrations detected in the discharge water in 1990's. - All three areas excavated around in 2009 - North area: 50-feet by 50-feet to a depth of 0.5-feet bgs excavated. Two (2) confirmatory soil samples collected demonstrated lead concentrations below RCG DCSL 400 ppm. - Lagoon pump house area: excavated, but sludge material not identified, and soil samples from excavated soil had lead concentrations below RCG DCSL of 400 ppm, so soil was returned to excavated areas as backfill. -South ditch: 900-feet by 10-feet to a depth of 0.5-feet bgs excavated from storm drain outlet, downstream to northeast corner of former State Road 67 and Delaware Street. -Lead was detected in one (1) of nineteen (19) post excavation confirmation soil samples along the southern ditch, with a concentration of 1,030 ppm (0 to 0.5 bgs), which is above all regulatory allowable limits.</p>	Heavy Metals (e.g., lead and arsenic); cVOC	Air; Surface; Subsurface	Yes	Yes; See Table 2 for further details

M3 (2 of 2)	AB177	DELPHI ENERGY & ENGINE	4500 S DELAWARE RD	AIRS	035-5586-00032 (No Electronic File Exists)		2013 Final Technical Conclusions: <i>Arsenic in soil</i> - Arsenic detected in 20 of 52 shallow soil samples; ranging from 8.5-28.2ppm - Arsenic RCG RDCSL is 8.5 ppm and/or IDCSL 24ppm - Sitewide average is 11.01 ppm, and no anthropogenic source on-site identified, thus IDEM concluded no unacceptable risk exists at site for commercial/industrial <i>Lead in soil</i> -lead near pump house (east side of property) still contains extremely high levels (>3,000ppm up to >58,000ppm) -One soil sample on south portion and one on north portion of property had concentrations above 1,000ppm (0-0.5 feet bgs) <i>Groundwater</i> -Arsenic and lead detected above respective RCG MTGSLs, but lead detected in only one location above RCG Res TAP GWSL (16ppm) (near south-central/east portion of site). -TCE and VC detected above RCG Res TAP GWSLs and RCG Res VE GWSLs, but not above respective Indus VE GWSL -"Indicating the detected contamination does not pose an unacceptable risk to indoor air quality for commercial/industrial redevelopment" - IDEM VFC document no. 70023082. ERC Restrictions Summary: -Industrial/commercial use only -No groundwater use -No excavation or construction in "restricted area" around former lagoons -Excavation in area of Pump House must be approved by IDEM prior, and soil excavation work plan shall be submitted to IDEM prior to initiating work. Summary COCs: Arsenic, lead (soil); TCE, Vinyl Chloride, Total Chromium, and Total Lead in Groundwater. Lead release to atmosphere	Heavy Metals (e.g., lead and arsenic); cVOC	Air; Surface; Subsurface	Yes	Yes; See Table 2 for further details

M5 (1 of 2)	AC180	FRANKLIN PROPERTY	500 FT EAST OF 4500 HOYT AVENUE	FINDS	110046353218		Data Source: SEMS Environmental Interest: Superfund (Non-NPL) Type: Potentially Contaminated Site	Heavy Metals (e.g. , lead)	Surface and Subsurface	No	Yes; See Table 2 for further details
	AC181		4500 HOYT AVE		110058536730						
	AC182		500 FT EAST OF 4500 HOYT AVENUE	SEMS	INN000510785	Information: Not on the NPL NPL status: No further Remedial Action Planned - doesn't qualify for NPL based on existing information Start/Finish Date: 2012/2015					
	AC182			SEMS	510785	<p>According to IDEM VFC Documents No. 80183648: As part of a preliminary assessment, IDEM conducted a site visit in May of 2012 to screen for lead contamination and other metals in soils using an X-ray Fluorescence (XRF) instrument. These activities originated from a complaint in 2006 that the property owner was attempting to excavate waste which included lead waste. According to a report in 2006, vegetation from a majority of the site had been removed exposing wastes that had been buried, however these wastes and soil were placed back into the areas where they had been excavated. Based on review of historical aerial imagery and interviews of past property owners and nearby residences, the site had been used as a local dump in the 1940's and 1950's for various wastes including hazardous waste. The dump had been about 10-feet deep and 2.9 acres.</p> <p>In May of 2012, IDEM completed thirteen (13) XRF readings on-site, and an additional seven (7) were taken off-site. The average on-site soil lead concentration was 120 ppm, with a range of 25-399 ppm. The three highest readings (330-399 ppm) were clustered in the middle of the site. No groundwater was sampled to determine whether or not lead had leached into the underlying aquifer, nor is it known if any other hazardous materials were deposited at the site.</p> <p>IDEM recommended that further investigation on nearby residential areas is necessary to confirm that there is no risk to human health. Also, it is possible that six (6) main state endangered species are at risk if they are utilizing this area as a habitat.</p> <p>Review of historical aerial images indicates that earthwork was completed at the site around 2005 to 2006, likely reworking the drainage channel running through the center of the property and appearing to place fill in the northern portion of the property.</p>

M5 (2 of 2)	N/A	Franklin Property	500 FT EAST OF 4500 HOYT AVENUE	Indiana State Cleanup	0000900		According to Muncie Citizens Group and IDEM VFC Documents No. 82828705, 82837595, 82847488, and 82887486: Based on complaints from a member of Muncie Citizens Group, IDEM conducted well water samples from 10 residential properties along Hoyt Ave, just west of the Franklin property. Samples were taken and analyzed for VOCs and metals in July of 2019, with some residences receiving a second round of sampling in August. No VOCs were detected, and arsenic, barium, and lead were detected, but were below their respective RCG GWSLs, with the exception of one residence having elevated arsenic levels. However, after a third round of sampling at this one residence in December of 2019, the total dissolved arsenic levels were non-detect, and thus IDEM determined that the detected arsenic levels were likely from a natural source. No on-going monitoring occurring.	Heavy Metals	Surface and Subsurface	No	Yes; See Table 2 for further details

M27A (2 of 2)	A3	MUNCIE PAPER PROCESSING	701 WEST 23RD STREET	US Brownfields	8-Aug-12		<p>According to IDEM VFC document no.: 80191481</p> <p>Site History: Muncie Paper & Pulp and Hinde and Dauch Paper Company from 1892 to 1940s; Goodyear Tire and Rubber Metal Parts in 1950s to 1960s; Jordan Paper Products in 1987; Muncie Paper Processing in 1992; paper recycling center until 1999. During remedial activities in 2012, an undocumented dump within 5-10 feet of Buck Creek was discovered containing, among other things, lead battery components. This material was removed during excavation activities.</p> <p>ERC: Cannot use for residential purposes or groundwater use. Excavated arsenic and lead as part of remediation. Residence locates adjacent to site on southwest side. Still need to characterize slag material as part of any development. Muncie Sanitary District plans to use as retention overflow pond site. Note: Lead confirmatory samples reported in ERC documents appear to be partially incorrect; thus, lead in the soil may exist above applicable regulatory levels. Further review may be needed.</p> <p>Contaminants: Arsenic, lead, and benzo(a)pyrene in soil above regulatory levels. TCE, vinyl chloride, cis-1,2-dichloroethene, arsenic, benzo(a)pyrene, dibenzo(a,h)anthracene, and bis(2-ethylhexyl)phthalate in groundwater detected on-site above applicable RCG residential screening levels. Unidentified amount of uncharacterized slag material exists on-site beneath slabs</p> <p>Not on National Priority List (NPL)</p> <p>Note: ERC recorded March 5, 2015 Additional info: Shall not occupy any newly-constructed building on Real Estate w/o completing 1.) evaluate and determine presence or absence of vapor intrusion; Or 2.) install, operate, and maintain a vapor mitigation system.</p>	Heavy Metals; VOC / cVOC	Surface and Subsurface	Yes	Yes; See Table 2 for further details

M29 (3 of 5)	J58	PROGRESS RAIL	3500 S COWAN RD	NPDES	INRA02482	<p>The following Information can be found in EDR and Multiple documents found on IDEM VFC. However, the specific details described below were copied from IDEM VFC document no. 82958667 dated April 29, 2020, and additional details from document no. 80269598.</p> <p>Site Use Description: The plant was constructed in 1961, and was owned and operated by Westinghouse Corporation until 1989. Westinghouse and Asea Brown Boveri (ABB) jointly manufactured and repaired transformers at the Site until 1991. ABB purchased the facility from Westinghouse in 1991, and continued the manufacture and repair of transformers until 1999. Arizona Maricopa purchased the facility in 2010 and is the present owner. The Site property is presently occupied by Progress Rail, Inc., and is used for the manufacture and testings of diesel locomotives.</p> <p>COC's: Petroleum-based fluid containing polychlorinated biphenyls (PCBs) was reportedly used for facility production processes until 1973. PCBs at concentrations of up to 110,000,000 micrograms per liter (µg/L) are the principal Site Constituents of Concern (COCs), and are present as light non-aqueous phase liquids (LNAPL), as dissolved impacts within on-site groundwater, and in surface/subsurface areas. Volatile Organic Compounds (VOCs) and semi volatile organic compounds (sVOCs) are also included as Site COCs under the VRP.</p> <p>Areas of Contamination: Three areas in the central, west, and northwestern portion of the existing facility on site have ongoing subsurface contamination. The full extents of Site PCB impacts to groundwater remain to be delineated. As of April, 2020, only the upper water-bearing zone has been investigated on the property. On-site soils have been impacted by PCBs at concentrations exceeding associated IDEM Remediation Closure Guide (RCG) direct contact screening levels. sVOCs and VOCs have not been detected in the VRP coverage area at concentrations exceeding IDEM RCG screening levels.</p> <p>Current activities: IDEM indicated that a remediation work plan (RWP) is ready for technical approval as of April 29, 2020. Proposed activities include: several excavations, LNAPL recovery, long-term groundwater monitoring for plume behavior evaluation, engineering controls, and an environmental restrictive covenant (ERC to address exposure risk. Quarterly groundwater monitoring plan is to be conducted.</p>	Heavy Metals; VOC; PCB	Surface and Subsurface	Yes	Yes; See Table 2 for further details

Notes:

^aThe location of each property entry can be found in **Figure 3**.

^bInformation courtesy of the EDR Area / Corridor Report provided in **Appendix D** or the EDR-City Directory Image Report provided in **Appendix C**, unless otherwise noted.

^cA description of each regulatory acronym can be found in the EDR Area / Corridor Report provided in **Appendix D**.

^dSummary description based on the review of regulatory and/or other sources as indicated. See **Section 3.0** of the report for a description of the review process.

^eSummary of release and designation as a REC based on the review of regulatory and/or other sources as indicated. See **Section 3.0** of the report for a description of the review process.

^fIf a REC is identified, the property is further summarized in **Table 2**.

Common Acronyms:

"bgs" = below ground surface

"COC" = Chemical of concern

"cVOC" = Chlorinated volatile / semi-volatile organic compounds

"GWSLs" = Groundwater Screening Levels

"ID" = Identification

"IDEM" = Indiana Department of Environmental Management

"LUST" = Leaking Underground Leaking Storage Tank

"MCL" = Maximum Contaminant Level

"PCB" = Polychlorinated biphenyls

"PFAS" = Per- and Polyfluoroalkyl

"PM" = Particulate Matter

"PM2.5" = Particulate Matter with a diameter less than 2.5 micrometers

"PM10" = Particulate Matter with a diameter less than 10 micrometers

"RCG" = Remediation Closure Guide

"RCRA" = Resource Conservation and Recovery Act

"REC" = Recognized Environmental Condition

"Res" = Residential

"RISC" = Risk Integrated System of Closure

"RWP" = Remediation Work Plan

"NAAQS" = National Ambient Air Quality Standards

"NPDES" = National Pollutant Discharge Elimination System

"SG" = Soil Gas

"SL" = Screening Levels

"UST" = Underground Leaking Storage Tank

"VE" = Vapor Exposure

"VFC" = Virtual File Cabinet

"VOC" = Volatile / semi-volatile organic compounds

Note: If an acronym listed in the above table is not defined in this list, please refer to the source of information as indicated in the data entry.

				COC(s)	Released to	Confirmed Release	Comments			
M5	- FRANKLIN PROPERTY - Former Waste Dump	500 FT EAST OF 4500 HOYT AVENUE	<p>Property consists of three parcels. Site used as a local dump in the 1940's and 1950's for various wastes including hazardous wastes. Based on historical aerial imagery, the dump appeared to be located in the east-central portion of the site (see Figure B1). Earthwork activities including excavation and razing of vegetation, and possible placement of fill was completed around 2005 to 2006 based on aerial imagery (see Figures B10 through B16). IDEM completed X-ray Fluorescence (XRF) sampling in the central and southern portion of the site in 2012. The highest concentrations (399 ppm) were found in the east-central portion of the site, near the former dump location.</p> <p>IDEM's preliminary assessment indicated that further investigation on nearby residential areas was necessary to confirm that there is no risk to human health. No groundwater samples were completed at the time. Also, there are six (6) main state endangered species at risk if they use the area as a habitat.</p> <p>In 2019 water samples were collected by IDEM at residential home directly west of the property on Hoyt Ave who are on private well water. No VOCs were detected, and arsenic, barium, and lead were detected, but were below their respective regulatory levels, with the exception of one residence having elevated arsenic levels. Follow up sampling at this residence led IDEM to determine that the arsenic levels were due to a natural source.</p> <p>Review of historical aerial photographs, topographic maps, a regional drainage review, and interviews of the Muncie Citizens Group reveals that this site has been a wetland/retention area receiving flow from upgradient properties which have been known to discharge heavy metals into surface water over the course of years, even decades (e.g., MUNDELL property ID's M2 and M3).</p>	Heavy Metals (e.g., lead, unknown)	Surface and Subsurface	N	<p>- IDEM preliminary assessment recommended investigations of residential areas for lead contamination which has not been sufficiently completed/monitored</p> <p>- Surface soil investigations not sufficient - did not test entire site nor account for the possibility that fill may have been placed over the site during the 2005 to 2006 earthwork activities.</p> <p>- Possibility of unidentified hazardous waste remains at site.</p> <p>- Historical wetland/pond area downgradient of major, known industrial pollution sources</p>	Ingestion (drinking water - well)	SAP-A SAP-B SAP-C SAP-H SAP-I	Primary
								Dermal Exposure (surface water)

 South Muncie Industrial Center Environmental Review
 Muncie, Delaware County, IN
 MUNDELL Project No. M20005

MUNDELL ID	Facility Name(s) ^c	Associated Addresses ^c	Brief Facility Description ^d	Reported Chemical(s) ^d				Exposure Pathway(s) ^e	Sampling Area(s) ^f	Concern ^g
				COC(s)	Released to	Confirmed Release	Comments			
M13	- Camtool Inc - Dead on Paintball LLC - Carb-Ex Inc - Haskett Ken Consulting	3690 S HOYT AVE	Company categorized as machine shop. Company part of Muncie Bureau of Water Quality Industrial Self-Monitoring	Heavy Metals (e.g., lead)	Surface	N	No additional information regarding spills released at property. Due to handling of heavy metals in Study Area	Inhalation/ingestion (soils)	SAP-A SAP-I	Primary
M16	- Mid-West Metal Products - Worldwide Technologies LLC - Franklin Powder Coating & MFG	3500 S HOYT AVE	Current facility, Mid-West Metal Products, deals with metal manufacturing (metal coating and allied services). Historical use as Franklin Powder Coating & Manufacturing likely also dealt with metal manufacturing.	Heavy Metals (e.g., lead)	Air and Surface	N	On-going air monitoring. Company deals with metal manufacturing. No confirmed release, but possible source.	Inhalation/ingestion (soils)	SAP-A SAP-D SAP-E SAP-I	Primary
			Mid-west Metal Products also located at the following properties: MUNDELL ID M25A, M31, and M42.				Inhalation			
M17	- Magna Technical Seal Inc - Techna-Seal Inc - Tad Industries - Patriot CNC INC	3416 S HOYT AVE	Magna Tech Manufacturing - vacuum impregnation sealing. Significant subsurface contamination at MUNDELL ID M1 in connection with Magna Tech industrial activities.	Heavy Metals (e.g., lead, chromium)	Air and Surface	N	Air permit and handling of lead; observed releases to surface	Inhalation/ingestion (soils)	SAP-A SAP-D SAP-E SAP-G SAP-I	Primary
			Muncie Citizens Group reported release to ditch in front of property in 2018.				Inhalation			
			Magna Tech Manufacturing also located at the following properties in the Study Area: MUNDELL ID M1 and possibly has historical connections to M37, and M39	Heavy Metals (e.g., lead); VOC / cVOC	Subsurface	N	In connection with Magna Tech operating at MUNDELL ID M1	Vapor Intrusion (VI)		
M21	- Exide Hamilton Ave Warehouse - DMI Distribution Inc - DMI Transportation Inc	3500 S HAMILTON AVE	Appears to be a storage warehouse. Due to Exide activities (see MUNDELL ID M2), possibly storing material containing lead. Exide also located at the following properties in the Study Area: MUNDELL ID M2	Heavy Metals (e.g., lead)	Surface and Subsurface	N	Handling / storage of lead batteries	Inhalation/ingestion (soils)	N/A	Secondary
M24	- Con-way Central Express - Preston Trucking Co - Nestle USA Inc - RICH LOGISTICS	1801 W. 26TH ST.	Facility has a diesel tank in operation since 1994, currently still in use. Operation and maintenance violations. Violations as late as January 2019. Leaking test results not available	VOC	Subsurface	N	Operation of diesel tank with reported violations and lacking appropriate monitoring data	Vapor Intrusion (VI)	N/A	Secondary
M25A	- Mid-west Metal Products Co Inc (2014)	3142 S COWAN RD	No information regarding COC's for this specific site was reviewed. However, three other sites associated with Mid-west Metal Products are located in Study Area with a REC for Heavy Metals. Thus, this is a REC as well. Mid-west Metal Products also located at the following properties in the Study Area: MUNDELL ID M16, M31, and M42.	Heavy Metals (e.g., lead)	Air	N	No reported violations at this property, but REC due to company history of on-going monitoring at nearby properties.	Inhalation	SAP-D SAP-E SAP-I	Secondary

Table 2.
Summary of Identified RECs^{ab}
 South Muncie Industrial Center Environmental Review
 Muncie, Delaware County, IN
 MUNDELL Project No. M20005

MUNDELL ID	Facility Name(s) ^c	Associated Addresses ^c	Brief Facility Description ^d	Reported Chemical(s) ^d				Exposure Pathway(s) ^e	Sampling Area(s) ^f	Concern ^g
				COC(s)	Released to	Confirmed Release	Comments			
M25B	- Westinghouse Electric Corp - Cowan Road and 23rd Stree Intersection Improvement - ABB Power T&D Co Inc	23RD ST & COWAN RD	Reported PCB positive transformer oil spill in 1990, and PCB investigation was conducted in 1989. No other information was available regarding the extent of potential contamination.	PCB	Surface	Y	Evidence of PCB contamination, but overall lack of information	Dermal Exposure (surface water)	N/A	Secondary
M27A	- Muncie Paper Processing - Muncie Paper & Pulp - Hinde and Dauch Paper Company - Goodyear Tire and Rubber Metal Parts - Jordan Paper Products	701 WEST 23RD STREET	Brownfield site. ERC active: cannot use for residential purposes or groundwater. Still need to characterize slag material. Muncie Sanitary District plans to use as retention overflow pond site. Known contaminants which still exist at site include but are not limited to: Arsenic, lead, benzo(a)pyrene in soil; TCE, vinyl chloride, and arsenic in groundwater. The southeast portion of this site is located in the FEMA Floodplain (IndianaMap).	Heavy Metals; VOC / cVOC	Surface and Subsurface	Y	Brownfield with ERC in 2015; Contamination present and characterization not complete	Dermal Exposure (surface water)	SAP-F SAP-J	Primary
								Ingestion (fish consumption)		
M28	- Omnisource Muncie - Dobrow Services	500 W 23RD ST	Metal recycling	VOC	Subsurface	N	No confirmatory samples taken after UST tank	N/A due to location of property	SAP-F	Secondary
				Heavy Metals (e.g., lead); VOC	Surface	N	Lead battery storage and AST	Ingestion (fish consumption)		Secondary
M29	- Progress Rail Manufacturing Corp - Progress Rail (Tank Farm) - ABB Power T & D CO - Arizona Maricopa Associates - ASEA Brown Boveri - Red Gold - Hoffman, Stanley D - A B B Inc - Muncie LLC	3500 S COWAN RD	Per IDEM VFC documents (see Table 1 for specific document references): Manufactured and repaired transformers from 1961 until 1999. The site property is presently occupied by Progress Rail, Inc., and is used for the manufacture and testings of diesel locomotives. Areas of contamination: Three areas in the central, west, and northwestern portion of the existing facility on site have ongoing subsurface contamination. The full extents of Site PCB impacts to groundwater remain to be delineated. As of April, 2020, only the upper water-bearing zone has been investigated on the property. On-site soils have been impacted by PCBs at concentrations exceeding regulatory levels. VOCs have not been detected at concentrations exceeding regulatory levels. Current activities: IDEM indicated that a remediation work plan (RWP) is ready for technical approval as of April 29, 2020. Proposed activities include: several excavations, LNAPL recovery, long-term groundwater monitoring for plume behavior evaluation, engineering controls, and an environmental restrictive covenant (ERC to address exposure risk. Quarterly groundwater monitoring plan is to be conducted.	Heavy Metals; VOC; PCB;	Surface and Subsurface	Y	Known, undelineated contamination; Remedial activities in progress	Ingestion (fish consumption)	SAP-D SAP-E SAP-F SAP-I SAP-J	Primary
				Mercury	Surface	N	Handling of mercury	Ingestion (fish consumption)		
				Heavy Metals (e.g., lead)	Air	N	Handling of COC, air permitting in Study Area	Inhalation/ingestion (soils)

Notes:

^aAll properties included in this table are those with identified RECs as indicated in **Table 1**.

^bThe location of each property entry can be found in **Figure 7**.

^cFacility names and addresses associated with each property as indicated in **Table 1**.

^dBased on applicable information as reported in **Table 1**.

^eExposure pathways determined based on review process as described in **Section 3.0** of the report.

^fA description of each Sampling Area is included in **Table 3** and **Figures 8** through **10**.

^gLevel of concern determined based on review process as described in **Section 3.2.4** of the report.

Common Acronyms:

"bgs" = below ground surface

"COC" = Chemical of concern

"cVOC" = Chlorinated volatile / semi-volatile organic compounds

"GWSLs" = Groundwater Screening Levels

"ID" = Identification

"IDEM" = Indiana Department of Environmental Management

"LUST" = Leaking Underground Leaking Storage Tank

"MCL" = Maximum Contaminant Level

"PCB" = Polychlorinated biphenyls

"PFAS" = Per- and Polyfluoroalkyl

"PM" = Particulate Matter

"PM2.5" = Particulate Matter with a diameter less than 2.5 micrometers

"PM10" = Particulate Matter with a diameter less than 10 micrometers

"RCG" = Remediation Closure Guide

"RCRA" = Resource Conservation and Recovery Act

"REC" = Recognized Environmental Condition

"Res" = Residential

"RISC" = Risk Integrated System of Closure

"RWP" = Remediation Work Plan

"NAAQS" = National Ambient Air Quality Standards

"NPDES" = National Pollutant Discharge Elimination System

"SG" = Soil Gas

"SL" = Screening Levels

"UST" = Underground Leaking Storage Tank

"VE" = Vapor Exposure

"VFC" = Virtual File Cabinet

"VOC" = Volatile / semi-volatile organic compounds

Note: If an acronym listed in the above table is not defined in this list, please refer to the source of information as indicated in the data entry or in **Table 1**.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Indianapolis, IN 46219
Contact: Luke Johnstone

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Mundell & Associates, Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Mundell & Associates, Inc (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

 Property Description:

Historic Site uses include: Muncie Paper & Pulp and Dauch Paper Company from 1892 to the 1940s Goodyear Tire and Rubber Metal Parts facility in 1950s through 1960s Jordan Paper Products in 1987 and Muncie Paper Processing in 1992. The Site was most recently used as a paper recycling center. Operations ceased in 1999. The 13.22 acre Site is located on the south side of Muncie at the corner of 23rd Street and Garkhey Street. Remaining on Site are the concrete foundations that supported the former on-Site structures. The Site is currently vacant and heavily vegetated. Several vaults and a possible underground storage tank UST are present on Site, along with areas where shredded paper has been dumped. Environmental assessment activities to date have identified hazardous substances in soil and groundwater at the Site. The known contaminants of concern on-Site which include chlorinated volatiles, semi-volatiles, and metals, in soil and groundwater, are consistent with the historical paper and pulp processing and rubber tire production conducted at the Site.

Environmental Interest/Information System:
 US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.
 IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

IC TYPE: Environmental Restrictive Covenant
Facility Id: 4010016
Program Area: Brownfields
Affected Media: Ground Water, Subsurface Soil
Date Ic Recorded: 03/05/2015
Description: Not reported
Control Method A: Maintain Vapor Mitigation System
Coverage A: Entire Property
Chemicals Of Concern A: VOCs - Volatile Organic Compounds
Comments A: Shall not occupy any newly-constructed building on Real Estate w/o completing 1.) evaluate and determine presence or absence of vapor intrusion; Or 2.) install, operate, and maintain a vapor mitigation system.

Control Method B: Excavation Notice Required
Coverage B: Entire Property
Chemicals Of Concern B: Metals, PAH - Polynuclear Aromatic Hydrocarbons
Comments B: Do not excavate soil on the Real Estate without first submitting a work plan at least 60 days prior to beginning work.

Control Method C: Ground Water Use Restriction
Coverage C: Entire Property
Chemicals Of Concern C: Metals, PAH - Polynuclear Aromatic Hydrocarbons, VOCs - Volatile Organic Compounds

Comments C: Not reported
Control Method D: Other Restriction (Specify)
Coverage D: Entire Property
Chemicals Of Concern D: Metals, PAH - Polynuclear Aromatic Hydrocarbons
Comments D: Line all newly constructed water flow or retention features with an impermeable protective cover to prevent infiltration.

Control Method E: Residential Use Restriction
Coverage E: Entire Property
Chemicals Of Concern E: VOCs - Volatile Organic Compounds

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
 IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FINDS:
Registry ID: 110070392345
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail_disp_program_facility?p_registry_id=110070392345

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

- . Waste name: Not Defined

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

FINDS:

Registry ID: 110000402591
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110000402591

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Distance
 Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
 EPA ID Number

MID-WEST METAL PRODUCTS (Continued)

1000979199

processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- . Waste code: F003
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F004
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F005
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F006
- . Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

- . Waste code: K049
- . Waste name: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

- . Waste code: K050
- . Waste name: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

- . Waste code: K051
- . Waste name: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

- . Waste code: K052
- . Waste name: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TSCA SUBMITTER

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RISK AND TECHNOLOGY REVIEW

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110003095258

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MUNCIE, IN 47302
Contact country: US
Contact telephone: 317-747-7147
Contact email: Not reported
EPA Region: 05
Land type: Facility is not located on Indian land. Additional information is not known.
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: NAME NOT REPORTED
Owner/operator address: ADDRESS NOT REPORTED
CITY NOT REPORTED, AK 99998

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

Violation Status: No violations found

Facility, Chemical, Releases and Other Waste Management Summary Information:

TRI ID: 47303NTRFR1200W
Form Type: Form R
Reporting year: 2017
Trade secret indicator: NO
Sanitized indicator: NO
Title of certifying official: PLANT MANAGER CHRIS PATTON
Certifying officials signature indicator: ELECTRONIC

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110000402555
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110000402555

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Property Description:

The property consists of vacant land formerly occupied by an industrial facility. Gravel drives, railroad beds, and remnants of parking areas were noted on the property. The former building location is noted by overgrown vegetation and areas of exposed soil and gravel sub-base. Areas of the property not occupied by the former improvements consist of mowed grass. Several drainage features are noted on the property. The property was acquired by General Motors in 1974 and the facility was constructed in 1976. Prior to 1974, the property was vacant, undeveloped, or utilized for agricultural purposes. The property was also historically utilized as a waste water lagoons and a wastewater pre-treatment plant WWPTP. The Property was utilized for automotive battery manufacturing since its original construction until mid-1998. Primary operations at the facility included injection molding, lead cell production, and battery assembly. In 2005 the on-site building was demolished and only portions of the concrete slab foundation, relict demolition debris, and the rail spurs remain on the property. Delaware Advancement Corporation obtained ownership of the property in November 2007 from General Motors Corporation.

EPA Region: 05
Land type: Other land type
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Date form received by agency: 2001-02-08 00:00:00.0

Hazardous Waste Summary:

. Waste code: D000
. Waste name: Not Defined

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D008
. Waste name: LEAD

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: K069
. Waste name: EMISSION CONTROL DUST/SLUDGE FROM SECONDARY LEAD SMELTING.

. Waste code: U226

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail_disp_program_facility?p_registry_id=110000402494

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that

these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- Property Description:

The property consists primarily of vacant land. Rail beds leaving the former industrial facility traverse the property from north to the northeast. A grass-covered berm is located along the northern property boundary. As noted by the former building s footprint, operations from the former General Motor s facility occurred along the southern property boundary and extended a short distance onto the property. Areas of the property not occupied by the former improvements consisted of mowed grass. The property was acquired by General Motors in 1974 and the facility was constructed in 1976. Prior to 1974, the property was vacant, undeveloped, or utilized for agricultural purposes. The facility was utilized for automotive battery manufacturing since its original construction until mid-1998. Primary operations at the facility included injection molding, lead cell production, and battery assembly. In 2005 the building was demolished and only portions of the concrete slab foundation, relict demolition debris, and the rail spurs remain on the property and southern adjoining site. Delaware Advancement Corporation gained ownership of the property in November 2007 from General Motors Coporation.

Environmental Interest/Information System:

TSCA SUBMITTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring. SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year. US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110043543813

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:
IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

FINDS:

Registry ID: 110001366815
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail_disp_program_facility?p_registry_id=110001366815

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN
IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
 IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

AUL:

Name: AZZ GALVANIZING, MUNCIE
Address: 2415 S WALNUT ST
City,State,Zip: MUNCIE, IN 47302
IC TYPE: Environmental Restrictive Covenant
Facility Id: 6080402
Program Area: Voluntary Remediation Program
Affected Media: Ground Water, Subsurface Soil, Surface Soil
Date Ic Recorded: 10/26/2012
Description: Not reported
Control Method A: Agricultural or Food Crop
Coverage A: Entire Property
Chemicals Of Concern A: Metals
Comments A: Excavation Notice Required
Control Method B: Portion of Property
Coverage B: Metals
Chemicals Of Concern B: IDEM must be notified at least 5 days before the start of any soil disturbance activities.
Comments B: Not reported
Control Method C: Ground Water Use Restriction
Coverage C: Entire Property
Chemicals Of Concern C: Metals
Comments C: Not reported
Control Method D: Residential Use Restriction
Coverage D: Entire Property
Chemicals Of Concern D: Metals
Comments D: Not reported
Control Method E: Restricted Excavation Area
Coverage E: Portion of Property
Chemicals Of Concern E: Metals
Comments E: Do not excavate soil greater than 8 feet deep in the "Construction Worker Restriction Area" unless soil disturbance obligations are followed.
Control Method F: Not reported
Coverage F: Not reported
Chemicals Of Concern F: Not reported

System Type: H134
Source Code: G05
Form Code: W103
Description: WASTE HYDROCHLORIC ACID FROM GALVANIZING PROCESS

Name: AZZ GALVANIZING SERVICES MUNCIE
Address: 2415 S WALNUT ST
City,State,Zip: MUNCIE, IN 47302
Year: 2018
EPA ID: IND006418735
Tons Generated: 1079201
Tons Shipped OffSite: Not reported
Report Type: Not reported
Page No: 1
Waste Desc: HYDROCHLORIC ACID
UOM: Pounds
TSDf EPAID: OHD020273819
Management code: H134
Management Desc: Deepwell or UI: with or without treatment; this waste was counted as hazardous waste
Waste Code: D007
Rejected: N
Returned: N

NPDES:

Name: WITT GALVANIZING
Address: 2415 S WALNUT ST
City,State,Zip: MUNCIE, IN 47302
Permit Number: INRM00429
Primary Facility Sic Code: 3479
Major/Minor: Minor
Primary Facility Sic Desc: Metal Coating And Allied Services
Facility Type Desc: Privately Owned Facility
Permit Status Desc: Effective
Issue Date: 12/11/2016
Expired Date: 12/10/2021
Effective Date: 12/11/2016
Terminated Date: Not reported
DMR Cognizant Official: Not reported
DMR Cognizant Telephone: Not reported
Waterbody: Not reported
Total Actual Average Flow (MGD): Not reported
Total App. Design Flow (MGD): Not reported
FRS HUC Code: 05120201
Latitude In Decimal Degrees: 40.17275
Longitude In Decimal Degrees: -85.387513

In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR SYNTHETIC MINOR

AIR EMISSIONS CLASSIFICATION UNKNOWN

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
- Amount (Lbs): 14950

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
- Amount (Lbs): 5940

- Waste code: D005
- Waste name: BARIUM
- Amount (Lbs): 14950

- Waste code: D006
- Waste name: CADMIUM
- Amount (Lbs): 14650

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail_disp_program_facility?p_registry_id=110007573839

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110003127777

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
 IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

- . Waste code: D001
- . Waste name: IGNITABLE WASTE

- . Waste code: D035
- . Waste name: METHYL ETHYL KETONE

- . Waste code: F003
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F005
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Property Description:

The Site is located within a fully developed, mixed residential, commercial and industrial area on the south side of the downtown area of the City of Muncie. The Property is approximately 4.18 acres in size and is currently vacant, and includes three standing buildings, foundations of former buildings, construction/demolition debris and abandoned equipment throughout. The Site was occupied by the Common Sense Engine Co. in 1892 and 1896 and consisted of a foundry and machine shop and other associated buildings. By 1902 the Site was occupied by American Lawnmower Co. , and an additional foundry building was constructed on the west end of the Site. By 1911 the facility was also used as a school furniture manufacturer Richmond School Furniture . Several redevelopments building additions and removals occurred between 1911 and 1972 at the Site. The Site appears to have been occupied by American Lawnmower Co. and Richmond School Furniture throughout this period. The Site was last listed as Richmond School Furniture in 1978 and as American Lawnmower Company in 1993. The Site is currently owned by Arthur Hicks Jr.

Environmental Interest/Information System:
 IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail_disp_program_facility?p_registry_id=110009392059

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
 IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:
 IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Environmental Interest/Information System:
 IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110003070033

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System:
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

Hazardous Waste Summary:

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D040
. Waste name: TRICHLORETHYLENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U032
. Waste name: CALCIUM CHROMATE (OR) CHROMIC ACID H₂CrO₄, CALCIUM SALT

. Waste code: U103
. Waste name: DIMETHYL SULFATE (OR) SULFURIC ACID, DIMETHYL ESTER

US BROWNFIELDS:	
Name:	MUNCIE PRECISION HARD CHROME
Address:	1001 EAST 18TH STREET
City,State,Zip:	MUNCIE, IN 47302
Recipient Name:	Energize-ECI Regional Planning District Inc.
Grant Type:	Assessment
Property Number:	11-22-256-001-000 and 11-22-256-012-000
Parcel size:	2.7
Latitude:	40.1721111
Longitude:	-85.3766944
HCM Label:	Interpolation-Map
Map Scale:	-
Point of Reference:	Center of a Facility or Station
Highlights:	The Property is situated in a relatively flat area characterized by vacant land, railroad tracks, commercial/industrial and residential land uses. Single family residential homes are located to the north and a mobile home park is located to the east. Railroad tracks are located south of the Property followed by commercial and industrial land uses. Vacant land is located west of the Property. The Property includes two parcels of land, the west parcel, and the east parcel. According to the Delaware County GIS website, the east parcel is currently zoned as Intense Industrial (II), and the west parcel is zoned as Mobile Home Residential (MHR). The west parcel includes one building that is currently used for industrial activity, primarily rubber manufacturing and metal finishing. The Property also includes a storage shed (containing automobile tires) and vacant land that comprise the east parcel.

Environmental Interest/Information System:

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RISK AND TECHNOLOGY REVIEW

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SUPERFUND (NON-NPL)

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Registry ID: 110003074431
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110003074431

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
 IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

DAR COATINGS (Continued)

1001077064

processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. STATE MASTER

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Number of Days to Update: 9	Next Scheduled EDR Contact: 04/13/2020
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/16/2019	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

SHWS: List of Hazardous Waste Response Sites Scored Using the Indiana Scoring Model

List of hazardous waste response sites scored utilizing the Indiana Scoring Model. The Indiana Scoring Model is a method of prioritizing, for state response actions, those hazardous substances response sites which are not on the National Priorities List. The ISM serves as the Commissioners management tool to address those sites which pose the most significant threat to human health and the environment in addition to assuring the departments resources are allocated accordingly.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Date of Government Version: 10/12/2016	Source: EPA

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Delaware County, Indiana

Survey Area Data: Version 24, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 1, 2011—Apr 1, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
BdmB2	Belmore silt loam, 1 to 5 percent slopes, eroded	0.3	0.0%
CudA	Crosby silt loam, 0 to 2 percent slopes	490.5	24.6%
DdxA	Digby-Haney silt loams, 0 to 1 percent slopes	0.9	0.0%
FexB2	Fox loam, 2 to 6 percent slopes, eroded	2.4	0.1%
MecA	Martinsville loam, 0 to 2 percent slopes	11.9	0.6%
MecB	Martinsville loam, 2 to 6 percent slopes	0.6	0.0%
MmcB2	Miami loam, 2 to 6 percent slopes, eroded	96.5	4.8%
MmcC2	Miami loam, 6 to 12 percent slopes, eroded	2.0	0.1%
MryA	Millgrove silty clay loam, 0 to 1 percent slopes	6.3	0.3%
PgaA	Pella silty clay loam, 0 to 1 percent slopes	0.6	0.0%
ReyA	Rensselaer loam, 0 to 1 percent slopes	79.6	4.0%

Delaware County, Indiana

UccA—Urban land-Crosby-Treaty complex, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 5jppj
Elevation: 600 to 1,250 feet
Mean annual precipitation: 36 to 43 inches
Mean annual air temperature: 48 to 54 degrees F
Frost-free period: 150 to 180 days
Farmland classification: Not prime farmland

Map Unit Composition

Urban land: 45 percent
Crosby and similar soils: 20 percent
Treaty and similar soils: 15 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Urban Land

Setting

Landform: Till plains

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Other vegetative classification: Trees/Timber (Woody Vegetation)
Hydric soil rating: Unranked

Description of Crosby

Setting

Landform: Till plains
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loess over loamy till

Typical profile

Ap - 0 to 8 inches: silt loam
BE - 8 to 11 inches: silt loam
Bt - 11 to 14 inches: silt loam
2Bt - 14 to 28 inches: silty clay loam
2BCt - 28 to 36 inches: loam
2Cd - 36 to 80 inches: loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: 24 to 40 inches to densic material

Natural drainage class: Somewhat poorly drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately high (0.01 to 0.20 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 50 percent
Available water storage in profile: Low (about 5.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C/D
Other vegetative classification: Trees/Timber (Woody Vegetation)
Hydric soil rating: No

Description of Treaty

Setting

Landform: Depressions on till plains
Landform position (two-dimensional): Footslope
Down-slope shape: Concave
Across-slope shape: Linear
Parent material: Loess over loamy till

Typical profile

Ap - 0 to 10 inches: silty clay loam
A - 10 to 14 inches: silty clay loam
Btg - 14 to 37 inches: silty clay loam
2Btg - 37 to 48 inches: loam
2C - 48 to 80 inches: loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: Frequent
Calcium carbonate, maximum in profile: 40 percent
Available water storage in profile: High (about 9.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: B/D
Other vegetative classification: Mixed/Transitional (Mixed Native Vegetation)
Hydric soil rating: Yes

Minor Components

Miami

Percent of map unit: 5 percent
Landform: Till plains
Landform position (two-dimensional): Shoulder
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Other vegetative classification: Trees/Timber (Woody Vegetation)
Hydric soil rating: No

Pella

Percent of map unit: 5 percent
Landform: Depressions on till plains
Landform position (two-dimensional): Footslope
Down-slope shape: Concave
Across-slope shape: Linear
Other vegetative classification: Mixed/Transitional (Mixed Native Vegetation)
Hydric soil rating: Yes

Udorthents, loamy

Percent of map unit: 5 percent
Landform: Till plains
Other vegetative classification: Trees/Timber (Woody Vegetation)
Hydric soil rating: No

Rensselaer

Percent of map unit: 5 percent
Landform: Depressions on outwash plains
Landform position (two-dimensional): Footslope
Down-slope shape: Concave
Across-slope shape: Linear
Other vegetative classification: Mixed/Transitional (Mixed Native Vegetation)
Hydric soil rating: Yes

Dear Ms. Aultz:

Re: Preliminary Assessment
Franklin Property
Muncie, Delaware County
CERCLA #INN000510785

SITE SUMMARY

The Franklin Property site is located behind the 4500 block of South Hoyt Avenue southwest of Muncie, Delaware County, Indiana. IDEM's Site Investigation Section received a complaint from a neighbor in March 2006 about the Franklin Property owner excavating a former dump site with possible hazardous wastes present. Two battery manufacturing sites existed at the nearby Industria Centre Industrial Park within 2,000 feet of the Franklin Property. Phone calls to the original complainant and former property owners, as well as a review of historic aerial photos, revealed that a 3-acre portion of the property was used as a "city dump" for Muncie in the 1940s and 1950s. An eye witness said that the dump was at least 10 feet deep with debris, including battery fragments in the bottom of the pit in 1954. The nephew of the former property owner confirmed the use of the property as a dump and that battery wastes were placed on the site.

IDEM staff conducted a site visit in May 2012 to screen for lead contamination in soils at the site using an X-ray Fluorescence instrument. Results from this site visit showed elevated levels of lead in the surface soils of the old dump site up to 399 parts per million (ppm). On-site surface soils that had not been impacted by the historic dumping had lead concentrations ranging from 25 ppm to 59 ppm. Nearby off-site surface soils had lead concentrations ranging from 19 ppm to 93 ppm, confirming that there was a release of lead into the dump site's surface soils. However, IDEM did not sample groundwater to determine whether or not lead had leached into the underlying aquifer, nor is it known if any other hazardous materials were deposited at the site.

If you have questions or comments regarding this site please do not hesitate to contact me at (317) 234-9536 or aneff@idem.in.gov.

Sincerely,

Abbey Neff

SECTION 1.0 INTRODUCTION

The Indiana Department of Environmental Management (IDEM), Office of Land Quality (OLQ), Federal Programs Section, Site Investigation Program under a Cooperative Agreement (CA) with the United States Environmental Protection Agency (U.S. EPA), Region V Office, has been funded to perform Preliminary Assessments (PA) at certain sites listed in the Superfund Enterprise Management System (SEMS). This work is conducted under the authority of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, commonly known as Superfund, and the Superfund Amendments and Reauthorization Act (SARA) of 1986.

The primary objectives of the PA are to collect readily available information and conduct a site and environmental reconnaissance, to distinguish between sites that pose little or no risk to human health and the environment and sites that require further investigation, and to identify sites after requiring assessment for possible emergency response actions.

The Site Investigation Program was given approval by the U.S. EPA to conduct a PA at the Franklin Property located in the City of Muncie, in Delaware County, Indiana based on the results of a Pre-CERCLIS Screening (PCS) that was approved July 10, 2012.

Information contained in this report will be used to evaluate this site to support a site decision regarding the need for further Superfund action, including the possibility for the Franklin Property to be considered for inclusion on the National Priorities List (NPL) of hazardous waste sites.

SECTION 2.0 SITE BACKGROUND

Section 2.1 Site Location

The Franklin Property Site (herein referred to as the Site) is located behind (east of) the properties on the 4500 block of S. Hoyt Avenue in Muncie, Delaware County, Indiana. The Site can be found on the United States Geological Survey Muncie, Indiana 7.5 Minute Quadrangle Map at 40° 9'8.94" N latitude, 85° 25'31.11" W longitude, T20N, R10E, Section 30 SE. The Site is depicted in Figure 1 of Appendix A.

The city of Muncie is the county seat of Delaware County, lying approximately 30 miles west of the state's eastern border, and had a population of 70,085 in 2010. Indiana State Road 3 runs north and south through the city, while Indiana State Road 67 runs southwest to northeast and U.S. Highway 35 runs southeast to northwest. The local terrain is relatively flat with undulating hills. The White River flows east to west through the city and Buck Creek flows east to west along the south edge of the city where they join together approximately four miles west of Muncie in Yorktown. Muncie's economy has been largely based on industrial manufacturing, including the manufacture of lead batteries at Delco Battery and Exide Technologies, former General Battery, in the Industria Centre Industrial Park on the southwest side of the city.

The area surrounding the Site consists of mixed residential and commercial properties. To the east of the Site is the former Delco Battery facility, with the Exide Technologies facility located 2,000 feet northeast of the Site. Directly west of the Site are several residential homes, with the South Side Church of the Nazarene located immediately south of the Site.

Section 2.2 Site History

Aerial photos from the Indiana State Archives suggest most of the Site was primarily used for agricultural purposes prior to the development of the Industria Centre Industrial Park around the early 1970s. However, these aerial photos clearly show that as early as 1941 there was a rectangular area in the middle of the Site that was bounded by large "fencing" that cast a deep shadow (Appendix B). IDEM staff previously communicated with the nephew of the former property owner who revealed that the Site had been used as early as the 1940s and 1950s as a local dump for various types of waste, possibly including hazardous materials. Since this was before the time of federal regulations such as the Resource Conservation and Recovery Act

(RCRA), it is likely that commercial and industrial waste were mixed with residential waste that neighborhood residents deposited in the dump.

A resident of the neighborhood noted that the dump had been about 10 feet deep and 2.9 acres, and filled with various waste materials from around the area, including lead batteries, although the Industria Centre Industrial Park had not yet been established. The batteries could have been transported from other battery manufacturing plants in Muncie or by the residents themselves, since the property could have been easily accessed by local citizens. The nephew of the former property owner mentioned that once the dump had closed, his family then farmed the land. Even with the debris mixed throughout the soil, he stated that the crops were never affected by the waste. His family eventually sold the property to the industrial park, and the banks then received the parcels through foreclosure.

According to the current property owner, Mr. Franklin, the property was purchased by his company, Franklin Acres, Inc., from three local banks on March 27, 1997. In the fall of 2005, he installed a culvert across the ditch to give vehicle access to the property via the industrial park to the east in order to clear the property for future industrial use. However, the local residents fought the re-zoning application and the Delaware-Muncie Metropolitan Plan Commission refused to grant his request, so he decided to attempt to clear the land for agricultural usage.

In March 2006, a complaint was filed by a neighbor regarding the property owner's attempted excavation of waste at the Site. On April 13, 2006, IDEM staff inspected the Site in conjunction with Delaware County Health Department officials and confirmed evidence of battery casings and other wastes exposed during the excavation. According to the Trip Report from the inspection, "Vegetation from a majority of the site had been removed exposing wastes that had been buried onsite...however, the wastes and soil were placed back into areas excavated." In a letter to IDEM dated April 26, 2006, the current site owner indicated that he had no knowledge of the waste dumping that had occurred on the property from the east during the 37 years he had been in the industrial park (Mr. Franklin owns another property within the park). Even though he did not know the area had been used as a dump, the unidentified characteristics of the waste, in addition to the known lead component, may have contaminated groundwater aquifers in the area, the property's soil and the nearby ditch.

SECTION 3.0 FIELD INVESTIGATION ACTIVITIES

Section 3.1 Site Reconnaissance and Investigation

On May 23, 2012, IDEM staff conducted a reconnaissance visit to the Site. The purpose of the reconnaissance was to document area conditions, identify nearby targets and industries, and screen the soils for potential releases. The staff entered the Site with the owner via the culvert on the east side of the property and immediately noticed the large amount of overgrown vegetation on the Site. The area nearest the culvert had obvious ridges leftover from the excavation in 2006 and the rest of the Site was densely covered with shrubs and small trees that made accessing the Site difficult. Bare soils were only occasionally visible without cutting the vegetation, but the central portion of the Site did have some evident broken glass, plastic and at least one old tire. None of the debris observed on this day could truly be classified as coming from a battery, but the vegetation was so thick that only an extremely small portion of the surface was visible.

Since the main concern was the battery and other lead-related waste found on the Site, an X-Ray Fluorescence (XRF) instrument was utilized to screen the surface soils for lead and other metals on-site and at various points throughout the industrial park. Thirteen XRF readings were taken on-site and an additional seven (7) XRF readings were taken off-site to assess background conditions and the potential migration of lead and other metals. Two (2) of the background samples were taken near the preschool facility located in the South Side Church of the Nazarene. The average on-site soil lead concentration was 120 parts per million (ppm), with a range of 25 ppm to 399 ppm (Appendix A, Figure 5). Three (3) of the samples had lead concentrations ranging from 330 to 399 ppm and were clustered in the middle of the Site in an area with debris at the surface. The off-site lead concentrations in the soil ranged from 19 to 93 ppm. The two lead samples at the daycare were 19 and 31 ppm.

Section 3.2 Past Environmental Investigations

The only previous environmental investigation of the Site was the site inspection by IDEM staff and Delaware County Health Department officials on April 13, 2006. According to the Trip Report, battery casings were found on the surface, in addition to broken glass and other household types of waste and debris, showing that waste was still present at the time of investigation. The Site Investigation Program completed a Pre-CERCLIS Screening of the Site in 2011. It was determined that there was sufficient concern to go forward and perform a Preliminary Assessment.

SECTION 4.0 MIGRATION PATHWAYS

Section 4.1 Groundwater

The groundwater migration pathway is not the primary focus of this investigation. Groundwater samples were not taken as part of this Preliminary Assessment. There are no monitoring wells on the Site, but there are multiple wells surrounding the Site, both municipal and private.

Indiana Department of Natural Resources (IDNR) records indicate that roughly 1,322 total wells are located within the four-mile radius of the Site. One of the nearest wells is located at the South Side Church of the Nazarene just 0.15 mile south of the Site. There are five (5) Public Water Supply (PWS) wells within four (4) miles of the Site according to IDEM's records, including three (3) wells belonging to the Yorktown Water Department (Appendix A, Figure 4). The Yorktown wells are located about 3.5 miles northwest of the Site and serve over 5,000 people. The other two PWS wells are located about 3.5 miles southwest of the Site at the Country Squire Mobile Home Park. This mobile home park serves around 48 residents. According to results determined from routine testing submitted to IDEM, there have been no significant concentrations of contaminants reported in any of the municipal wells within the four-mile radius. The industrial park located to the east and north of the Site is supplied by Indiana American Water-Muncie, as shown by the water mains in Appendix C, but none of the municipal wells from the company are located within the target radius.

Due to the large population within the four-mile radius and the lack of major municipal wells located within the area, IDEM staff readjusted the calculated population to account for the true exposed population within the four-mile radius of the Site. Utilizing 2010 U.S. Census Bureau data for Delaware County, the average household size was 2.34 individuals per home. Table 1 exhibits the number of wells, both private and municipal, within the four-mile radius of the Site and the population that each sector of the radius serves through those wells. The IDNR Population was calculated by taking the private well records for each of the target distances and multiplying the number of wells by the average household size. The total PWS Population was determined by searching the IDEM database for both the Yorktown Water Department wells and the Country Squire Mobile Home Park wells located within the four-mile radius, which provided populations served for each, 5,008 and 43 people, respectively. The populations for each radius were then totaled to generate an overall population

served by groundwater, approximately 8,177 people, including the workers and attendees of the nearby church’s preschool.

Table 1. Population potentially exposed to groundwater contamination. “Total Population” value calculated by the total number of private wells multiplied by the average household size for Delaware County (2.34 people/home), plus the number of people served by the Public Water Supply wells within each target distance.

Distance (miles)	IDNR Population (# of wells x 2.34 people)	PWS Population	Total Population
0-0.25	8 x 2.34 = 19	0	51 ^a
0.25-0.5	44 x 2.34 = 103	0	103
0.5-1	77 x 2.34 = 180	0	180
1-2	215 x 2.34 = 503	0	503
2-3	434 x 2.34 = 1016	0	1016
3-4	544 x 2.34 = 1273	5008 + 43 = 5051	6324
Total			8177

^a = Value reflects an additional 32 people who attend or work at the South Side Church of the Nazarene’s Preschool.

Section 4.1.1 Site Geology

The Site is located within the White River basin, which is part of the Tipton Till Plain physiographic area. Silurian Dolomite and Limestone bedrock underlies anywhere from 30’ to 150’ of unconsolidated glacial deposits in the Muncie area. This ground moraine is composed of loamy tills interbedded with thin, continuous to discontinuous layers of stratified sand and gravel. Aquifers in the Muncie area are either in continuous sand and gravel layers or in the carbonate bedrock. The water table is generally within 10 feet of the surface, and the hydraulic conductivity of surficial sand and gravel aquifers range from 24 to 1500 feet per day. Buried discontinuous sand and gravel aquifers tend to have much lower water yields than the surficial aquifers, and are often bypassed by drillers to reach the higher-yielding bedrock aquifers. The Silurian carbonate bedrock of Delaware County was once exposed and underwent karst development in its upper surface where the majority of bedrock wells are drilled. Bedrock aquifers are chiefly recharged by infiltration and percolation of rainwater, and the hydraulic conductivity of the bedrock aquifers is typically 13.4 feet per day, depending on the fracture density and degree of weathering.

Section 4.1.2 Aquifer Description

IDNR well logs for six of the wells closest to the Site, including both municipal and private, indicate clay soils in the top 6-12 feet, with mixtures of sand, gravel, boulders, and clay further down to the bedrock. The depth to the limestone bedrock is only 48 feet about 0.3 mile to the north of the Site, 86 feet at a well just west of the Site (~0.1 mile), and 121 feet about 0.2 mile to the south, indicating bedrock generally sloping downwards and toward the south. The static water level at these six wells ranges from 5 to 25 feet in depth, but is typically 10 feet deep. Little information was available on groundwater flow in the region, but Hoosier Pete's Convenience Store, a Leaking Underground Storage Tank site about 1.7 miles to the northeast of the Franklin Property (Appendix A, Figure 4), indicated groundwater flow toward Buck Creek to the east and south. Groundwater flow in the unconsolidated aquifer at the Franklin Property site can similarly be inferred to flow toward Buck Creek to the north and west of the Site. However, once the water reaches the limestone bedrock in this vicinity, gravity would likely cause the water to flow downslope toward the south through karst formations.

Section 4.1.3 Groundwater Sampling

There is no indication that contamination has spread to the nearby aquifers and wells from the surface soils. No groundwater samples were taken as a part of this Preliminary Assessment.

Section 4.2 Surface Water

No surface water samples were taken as part of this Preliminary Assessment. There was no evidence of lead in the surface soils beyond the boundary of the old city dump on the Franklin Property, indicating that the contamination had not spread over the land via runoff. Runoff is restricted from eroding the surface soils due to the dense vegetation that is located at the Site.

Surface water at the Franklin Property either flows overland in an easterly direction into the ditch along the east side or a northerly direction to the wetland impoundment on the northernmost portion of the property. From the wetland impoundment, the surface runoff drains to the west for approximately 0.4 mile to the west to its probable point of entry (PPE) into Heath Ditch, which flows another 0.7 mile west before meeting with Buck Creek. The water in Buck Creek flows for about four (4)

miles northwest until it reaches its confluence with the White River in Yorktown (Appendix A, Figure 3). The White River drains an area of 5,603 mi² at an average flow in Muncie of 223 cubic feet per second, which was measured from 1932 to 2005. Eventually the White River joins the Wabash River on the state border just east of Mt. Carmel, Illinois, and from there meets the Ohio River and the Mississippi down to the Gulf of Mexico.

Section 4.2.1 Drinking Water Threat

The majority of residents within the four-mile radius of the Site obtain drinking water from municipal and private wells. No known surface water intakes that are sources for drinking water exist within the 15-mile surface water pathway.

Section 4.2.2 Human Food Chain Threat

The human food chain threat category generally evaluates fisheries where consumption of contaminated species may occur. The primary fisheries within the 15-mile surface water pathway from the Site are the West Fork of White River and Buck Creek. There are specific fish advisories for each of the water bodies. Buck Creek has three (3) types of fish in the “do not eat” category, while the West Fork White River has nine (9) species. All of the species are at risk of PCB (polychlorinated biphenyl) contamination, and the largemouth bass species in the West Fork White River is also at risk of mercury poisoning. This information does not necessarily connect the fisheries to the Franklin Property since PCBs and mercury were not detected at the Site. A threat to the human food chain via the surface water pathway is unlikely for this site.

Section 4.2.3 Environmental Threat

The Indiana Department of Natural Resources (IDNR) was contacted to determine if any significant natural features or endangered, threatened, and rare species inhabit the vicinity of the Site. A review of the Site by the IDNR (Appendix D) revealed several threatened or endangered species within a four-mile radius of the Site or within one (1) mile of the 15-mile surface water pathway. There are six (6) state endangered species within this area. Two (2) species of state endangered birds, Loggerhead Shrike and Black-crowned Night Heron, two (2) species of snakes, Butler’s Garter Snake and Kirtland’s Snake, and one (1) species of turtle, Spotted Turtle, could all potentially use the Franklin

Property and adjacent wetland impoundment as habitat. Additionally, there is one (1) species of state endangered vascular plant, Shaggy False-gromwell, which could also grow on the Site. Two (2) federally endangered species of mollusks, Northern Riffleshell and Clubshell, are not considered significant targets for the Franklin Property site due to the lack of a surface water pathway. Wetlands along Buck Creek and the White River would likely not be exposed to the contamination since there is no known surface water pathway.

Section 4.3 Soil Exposure

As part of the May 23, 2012 IDEM investigation, surface soils were screened for lead and other metal contaminants using X-Ray Fluorescence at 20 sample locations on and around the Franklin Property. The soil was analyzed due to the lead batteries and other industrial waste found in the property's soil. The seven (7) soil samples taken from various places throughout the industrial park revealed lower levels of lead, averaging 66 ppm (Appendix E). Additionally, nine (9) samples taken on the property from areas not part of the dumping grounds exhibited lead levels averaging 38 ppm. However, the four (4) samples taken from the main portion of the property presented soil lead levels averaging 305 ppm and reaching as high as 399 ppm. No other metals were detected at significant concentrations throughout the screening process.

Currently, there are no target individuals affected by the soil exposure pathway based on sampling results. However, further investigation on the nearby residential areas is necessary to confirm that there is no risk to human health. The area is wooded, vegetated, and not fenced, which would help to prevent children from entering the contaminated area. It is also possible that the six (6) main state endangered species are at risk if they are utilizing this area as a habitat.

Section 4.4 Air Route

No air samples were collected as part of this Preliminary Assessment, nor were observed release criteria met for this pathway. No confirmed air release has been documented.

SECTION 5.0 SUMMARY AND CONCLUSIONS

The IDEM Site Investigation staff received the Franklin Property Site through a complaint in March of 2006 from the neighbor of the property located behind 4500 S. Hoyt Avenue in Muncie, Delaware County, Indiana. The complaint alleged that the property owner was attempting to excavate the Site where battery casings and other wastes—possibly hazardous as well as residential—had been discarded for many years. The nephew of the former property owner mentioned that the Site was used as a local city dump in the 1940s and 50s. When IDEM staff and Delaware County Health Department officials visited the Site in April of 2006, waste was still visible in various areas of the property. IDEM staff then visited in May 2006 to screen the soil surface for metals with an X-Ray Fluorescence instrument. The screening samples found that the soils directly on the former dump site had lead concentrations up to 399 ppm, more than three times background. The soil exposure pathway is the major pathway of concern, and there is no evidence of migration to any of the other pathways.

 Census block group 2006 total population

Disclaimer: This map is intended to serve as an aid in graphic representation only. This information is not warranted for accuracy or other purposes.

There are known sources of error in the population estimates presented on this map including:

- The Census 2006 block group population data is out of date, and is itself an imperfect estimate of population.
- The adjusted population estimate derived from the Census 2006 block group data assumes that the population is evenly distributed in each block group polygon.
- The Census 2006 block group population has been clipped to include Indiana data only.

Method of Estimating Population: The adjusted population estimate is the sum of Census 2006 block group populations. The adjusted population estimate (TOTPOP field) is adjusted to include only the areas of the block groups contained inside the buffers. The adjusted population estimate assumes that the population is evenly distributed in each block group polygon. The specific procedure used in this analysis is as follows:

1. The point for the center of the site is selected interactively by the user through the 4 Mile Mapper model or a polygon is digitized through the 4 Mile Mapper Polygon model.
2. The user initiates the 4 Mile Mapper model to perform the rest of the multi-step analysis which is described in the following steps.
3. The study area point or polygon is buffered at 1/4, 1/2, 1, 2, 3 and 4 miles.
4. The original area of the census block polygons is calculated and stored.
5. The buffers are used to clip the census block group polygons. This is a new area referred to as the shape area. The shape area has the attribute records associated with the original census block group polygon with the area of the new polygon area.
6. The shape area of the census block polygons is divided by original area of the census block polygons to calculate the percent change.
7. The percent change result is then multiplied by the population of the original census block to yield a calculated population for the new polygon. For example: Block Group A with an area of 10 square miles and a population of 200 people is split into 2 polygons by the 4 mile buffer ring. The area of the block group inside the 4 mile buffer is 2 square miles, or 20% of the area of the original 10 square mile block group. Assuming the population is uniformly distributed in Block Group A, the population from Block Group A that is within the 4 mile buffer ring should also be 20% of the total population for the block group. Twenty percent of 200 is 40 people. (2 ÷ 10 × 200 = 40)
8. The newly calculated population statistics are associated in a database table that is converted into a layer file that is displayed in the Four Mile Radius Map. The new population figures from the layers (attribute tables) are then copied into a spreadsheet that subtracts the population figure from the previous buffer. This is done by taking the population for each buffer distance and subtracting the population of the next smaller buffer distance to provide a population figure for the donut area bounded by each pair of consecutive buffer distances (e.g. 0 to 1/4, 1/4 to 1/2, 1/2 to 1, 1 to 2...). An adjusted population table is labeled and pasted into the Four Mile Radius Map.

The main code that repeats over and over for the 4Mi_Mapper model is: Buffer>Clip>Add Fields>Calculate Field>Dissolve

All models were developed by E.J. McNaughton, IDEM GIS Coordinator
